# idealpos Update History

[Return to top](#)

Close the POS Terminals windows then go to:

File > Customers > Customer Types

Select the Customer Type(s) from the list which your Online Customers are members of, then press "Modify".

Ensure that the "Use Points System" checkbox is enabled.

Also ensure that the "Point Multiplication Factor" is set to 1.

If required, the Point Multiplication Factor can be adjusted as required.

The Point Multiplication Factor is based on the Points per Dollar value.

Example: If the Points per Dollar is set to 1 and the Point Multiplication Factor is set to 2 and the Customer purchases an item that is \$10.00, they will earn 20 points.

Example 2: If the Points per Dollar is set to 2 and the Point Multiplication Factor is set to 2 and the Customer purchases an item that is \$10.00, they will earn 40 points.

Example 3: If the Points per Dollar is set to 1 and the Point Multiplication Factor is set to 1 and the Customer purchases an item that is \$10.00, they will earn 10 points.

Once the Customer Type has been configured, press the "Save" button on the bottom-right corner of the window.

You can repeat this step for each Customer Type that will be ordering their items via the eCommerce Web Store.

Idealpos Customer

Save

When a Customer places their order via the eCommerce Site, they will enter their First Name and Last Name. If the name that the Customer enters when placing their order matches a Customer in Idealpos, the existing Customer in your system will earn points after their order is finalised in your store. If the Customer does not exist in your system, they will be created automatically and will be assigned to the Default Customer Type configured in the eCommerce settings. In order for an existing Customer to accrue points, they will need to be a member of a Customer Type which has the "Use Points System" enabled. The Customer Type that a Customer is associated with can be viewed by going to: File > Customers > Customers. Select the Customer and press "Modify". The Customer Type will appear in the Customer Type dropdown box. If required, the Customer Type can be updated. Note that changing the Customer Type may result in the Customer's benefits changing (e.g. the Price Level they're assigned to may change and they may miss out on promotions that are specific to the Customer Type).

The screenshot shows the 'modify customer' interface with the following details:

- General Information:** Code: 2, Last Name: Charlton, Given Names: Sarah, Title: Miss, Customer Type: ONLINE (highlighted), Scan Code: 9850859357357, Auto, Other Codes: [empty].
- Address Details:** Address: 42 Wallaby Way, Suburb: Hampden, State: NSW, Postcode: [empty].
- Delivery Address:**  Delivery Address same as Above, Address: [empty], Suburb: [empty], State: [empty], Postcode: [empty].
- Contact Details:** Phone: 0765536455, Mobile: 0499754163, Fax: [empty], Email: [empty].
- Sales / Accounting:** Auto % Discount: 0, Price Level: 2,  Bar Tab,  Account, Credit Limit: 0.00.

# idealpos Update History

[Return to top](#)

The next step is to enable "Use Points" for the Tender method that is used to process eCommerce Orders.

Go to: Setup > Global Options > Interfaces > eCommerce

The Web Order Tender will be displayed.

Take note of the Tender that has been selected.

If required, you can also take this opportunity to adjust/set the Default Customer Type which will be used when a new Customer places a Web Order via your eCommerce site.

If you want the Default Customer Type to earn points, ensure that "Use Points System" has been enabled for the Default Customer Type chosen (File > Customers > Customer Types > Select Type > Modify).

The screenshot shows the 'global options' window for 'site 1 (Site 1)'. The 'Interfaces' tab is active, and 'eCommerce' is selected in the left-hand pane. The right-hand pane, titled 'eCommerce Interface', contains the following settings:

- Web Order Tender: ONLINE (indicated by a yellow box and arrow)
- Web Order Location: Current Store Location
- Web Order Clerk: Online
- Default Customer Type: ONLINE (indicated by a yellow box and arrow)
- Price Level: PRICE 1
- Unmatched Items Link: >

Below these settings is a 'Sale Type Link' section with dropdown menus for:

- No Status: No Sale Type
- Pick up: Pickup
- Eat in: Pickup
- Delivery: Delivery

At the bottom of the interface pane, there are two checkboxes:

- Automatically Send Orders to Kitchen Printers
- Automatically Finalize Prepaid Web Orders

Finally, there is a 'Play Sound when Orders Arrive' dropdown menu with a right-pointing arrow.

Close the Global Options window, then go to:  
Setup > Function Descriptors > Select the Web Order Tender from the list > Modify  
Enable "Allow Points per Dollar?" then press "Save" to save your change.

The screenshot shows a software window titled "function descriptors" with a close button (X) in the top right corner. The window contains a form for configuring a function descriptor. The "Function" field is set to "TENDER 9" and the "Description" is "ONLINE". The "# of Receipts" is set to "1". The "Exchange Rate" is "0", "Lower Limit" is "0.00", and "Upper Limit" is "99999.99". The "Scan Code" field is empty. "Scan Code Amount" is "0.00", "Surcharge" is "0.00" with a percentage sign selected, and "Waive Surcharge Threshold" is empty. The "Override Receipt Footer" field is empty. The "User-Defined Text" field is empty. On the right side, there is a list of checkboxes: "Rounding?" (unchecked), "Credit Function" (checked), "Allow Points per Dollar?" (checked and highlighted with a yellow box and arrow), "Show in Banking" (checked), "Compulsory Amount" (unchecked), "Open Cash Drawer" (checked), "EFTPOS" (unchecked), "Account Tender" (unchecked), "Layby Tender" (unchecked), "Force Receipt" (unchecked), "GIFT VOUCHER Redemption" (unchecked), "Credit Note Tender" (unchecked), "Force Customer" (unchecked), "Force Reference" (checked), and "Allow Overcharging To Tips" (unchecked). At the bottom right, there is a "Save" button highlighted with a yellow box and arrow.

# idealpos Update History

[Return to top](#)

If you want to Inhibit Points from being accrued on Delivery Charges, this can also be achieved.

Go to: File > Stock Control > Stock Items

Select the Delivery Stock Item Code that is configured/linked to your eCommerce integration, then press "Modify".  
From the Advanced Tab of the Stock Item, enable "Inhibit Points Accrual".

The screenshot shows the 'stock items' interface with the 'Advanced' tab selected. The 'Points Settings' section contains the following options:

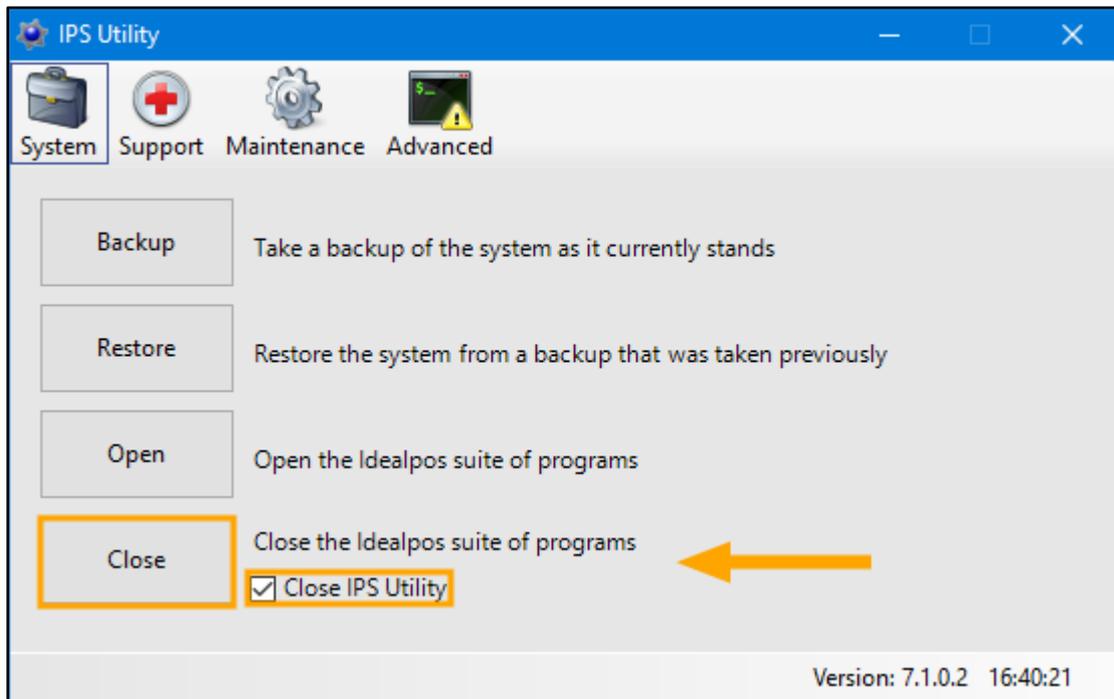

- Use Special Points : 0
- Inhibit Points Accrual
- Inhibit Purchase With Points
- Print Promotional Ticket

Other visible fields include:

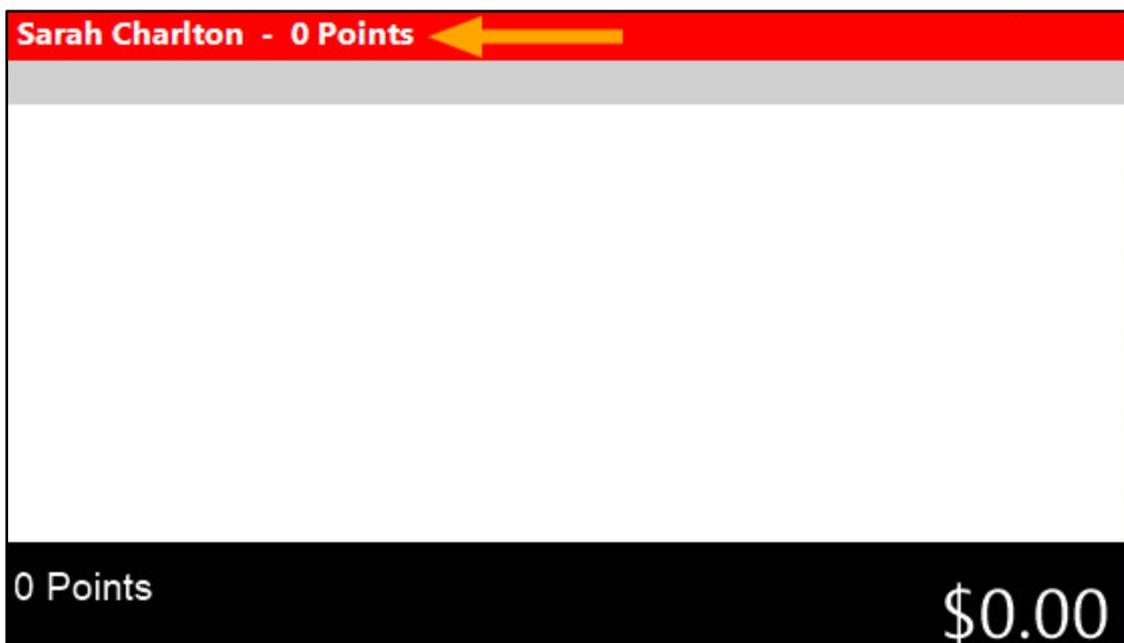

- Sales Prompt: [Empty text box]
- Link to Menu: 0 >
- Link to Grid: 0 > MAIN
- Link Table: 0 >
- Amount Override Limits: Lower Limit 0.00, Upper Limit 0.00, Profit% [Empty]
- Location 1: Stock Level 0 >>>, Recommended Level 0, Reorder Level 0
- Points by Price Level: PRICE 1-12, all set to 0
- National Product Number: [Empty]
- Receipt Tabs: 0

At the bottom right, there is a 'Save' button highlighted with a yellow box and an arrow pointing to it.

To ensure that any changes made have been applied, restart Idealpos via IPSUtils.  
Go to: Start > Idealpos > IPSUtils > Press "Close" to close the Idealpos Suite.

Start Idealpos and open the POS Screen.  
Add the Customer to the sale to check the Points Balance.  
The Points Balance will appear at the top of the Sale window next to the Customer's name:

Void the sale by pressing the Void Sale Button.

# idealpos Update History

[Return to top](#)

Go to your eCommerce Site and place a Web Order, entering the Customer Details the same as they've been recorded in Idealpos.

Once the order has been placed and the payment has been authorised/captured, the order will be sent to Idealpos. After the order is received by Idealpos, the POS Screen will show a "Web Orders" button along with a numeric value displayed indicative of the number of Web Orders that are waiting to be processed by the POS.

Note that if "Automatically Finalise Prepaid Web Orders" is enabled, any prepaid web orders will not trigger the "Web Orders" button to be displayed and they will simply auto finalise. Any Customers entered in the sale will automatically accrue points if the Customer Type has been configured to Use Points System.

The screenshot shows the Idealpos POS interface. At the top left, it displays the date and time '28 Apr 16:59' and the user 'Jeremy STANDARD'. A notification at the top right says 'WEB ORDERS 1' with a yellow arrow pointing to it. The main area is a grid of buttons for various product categories and items. The total amount shown is '\$0.00'. The grid includes categories like CAPPUCCINO, FLAT WHITE, LATTE, CHAI, SHORT BLACK, LONG BLACK, MOCHA, HOT CHOC, and TEA. It also includes options like EXTRA HOT, SKINNY, DECAF, 1 SUGAR, TAKEAWAY, SMALL, ICED DRINK, WATER, and KEYBOARD. Other categories include EXTRA CHOC, SOY, WEAK, 2 SUGAR, MARSH MALLOW, MEDIUM, MILKSHAKE, JUICE, and ORDER NUMBER. The bottom row includes DRINKS, CAFE, TAP BEER, SPIRITS, COCKTAILS, FRUIT & VEG, GROCERY, RETAIL, and MANAGER. The bottom right corner has buttons for SERVICES and ADMIN.

Press the "Web Orders" button to view the list of Web Orders awaiting processing.  
Select the Web Order from the list, then press "Finalise" on the bottom-right corner of the window.

The screenshot shows a software window titled "Web Orders" with a search bar at the top. Below the search bar is a table with columns: Code, Date, Name, Address, Postcode, Status, and Expected. The first row is highlighted in blue and contains the following data: Code: #1010, Date: 29 Apr 20, Name: Sarah Charlton, Address: 42 Wallaby Way Hampden Que, Postcode: 2440, Status: Paid, Expected: 29 Apr 20 02:52. To the right of the table, there is a summary section for "Sarah Charlton" with a red header, listing "STILL MINERAL WATER" (4.00) and "DELIVERY" (10.00), with a total of 14.00. At the bottom of the window, there are buttons for "Email", "Reprint Kitchen", and "Finalize". A yellow arrow points from the "Finalize" button to the "Expected" column of the selected order row.

Code	Date	Name	Address	Postcode	Status	Expected

DELIVERY 10.00  
14.00

Buttons: Email, Reprint Kitchen, Finalize

Confirm the prompt to finalise the order:

The dialog box has a dark background and contains the following text: "This Order has been Pre-Paid." followed by "Are you sure you wish to Finalize this Order?". At the bottom, there are two buttons: "Yes" and "No".

This Order has been Pre-Paid.  
Are you sure you wish to Finalize this Order?  
Yes No

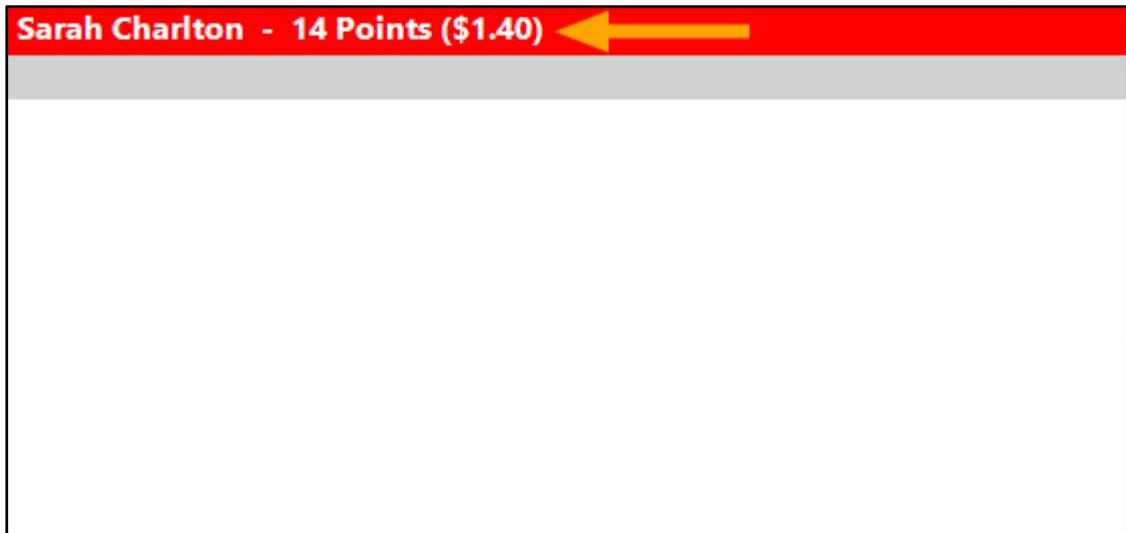

After finalising the order, the Customer will accrue the points they earned for their Web Order purchase.

# idealpos Update History

[Return to top](#)

This can be confirmed by adding the Customer to a sale.

The updated Points Balance will appear next to the Customer's Name as per the below example:

The Customer's Points Balance will also appear on the receipt and in Journal Enquiry.

Go to: Enquiry > Journal History

Select the Journal from the list.

The Points accumulated in the current sale will be shown next to "Points" and the Customer's Total Points Balance will be listed next to "Total Accumulated Points".

In the below example, Points Accrual was not inhibited on the Delivery Item.

The screenshot shows the 'journal history enquiry' window. On the left, there is a table of transactions. The transaction with Audit 526 is selected. On the right, a detailed receipt for this transaction is shown, with the 'Points' and 'Total Accumulated Points' values highlighted by a yellow box and an arrow.

## Option for Default Aging type for New Account Customers

This function adds the ability to control the Default Aging Type when creating new Account Customers. Previous to this change, the Aging Type would default to "30/60/90 – Monthly" when creating a new Account Customer and if the other Aging Type of "7-14-21 days" was required, this would need to be changed when creating the new Account Customer.

With this change, you now have the ability to specify which Aging Type will be pre-selected by default when creating a new Account Customer. This function is useful for users who consistently use a specific Aging Type for all their Customers in line with their Customer accounts policy.

To configure and control the Default Aging Type, go to:

Setup > Global Options > Customers > Miscellaneous

Select the Default Aging Type from the Default Aging Type dropdown box as required:

The options available are:

- 30-60-90/Monthly
- 7-14-21 Days

The screenshot shows the 'global options' window for 'site 1 (Site 1)' with the 'Customers' tab selected. The 'Miscellaneous' section is expanded, and the 'Default Aging Type' dropdown is highlighted with a yellow box and an arrow, showing the selected value '30-60-90 / Monthly'. Other sections visible include 'A4 Tax Invoice', 'Layby Statement', 'Account Invoice/Activity Statement', 'Tender Spend Limits', 'Photo Folder', 'Customer Date Function', and 'User-Defined' fields.

# idealpos Update History

[Return to top](#)

Once the Aging Type has been set as required, a new Account Customer can be created and the Aging Type configured above will be pre-selected.

To create a new Account Customer, go to: File > Customers > Customers

From the bottom-right corner of the Customers screen, press the "Add" button:

Code	Last Name	First Name	Address 1	Address 2	Suburb	Scan Code
1	Harrison	Ben	Unit 11	51 Honeysuckle Ave	Groundsborough	9074002100196

## Digital Receipts

### Slyp Integration

Idealpos now supports integration with Slyp!

Slyp is a company that has revolutionised the traditional paper receipt into the modern age.

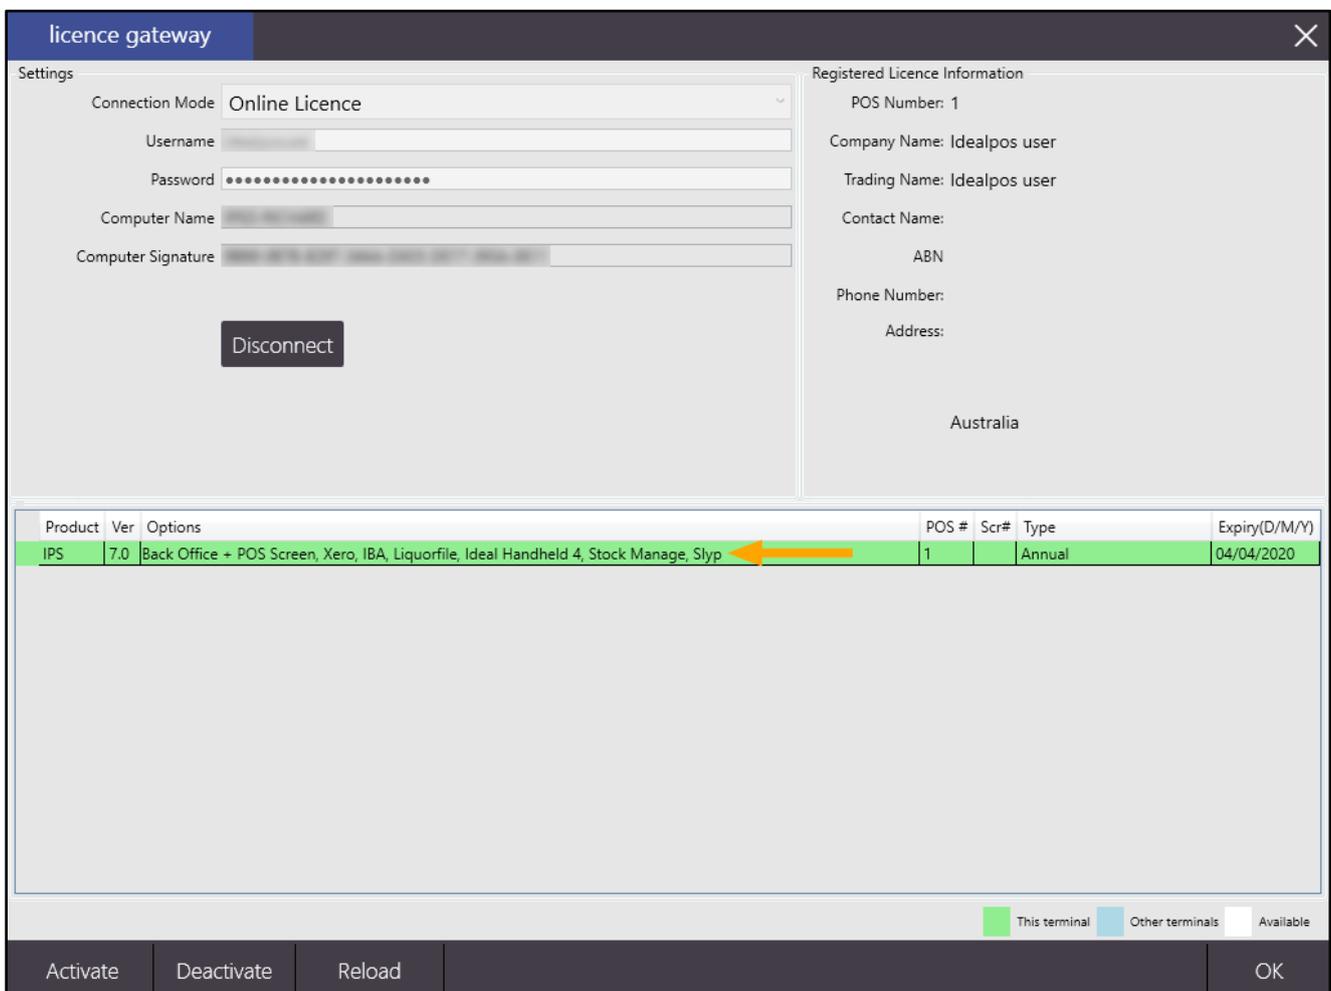

Instead of printing out a physical receipt at the end of a sale, Slyp enables a digital receipt to be sent to the customer either via email or SMS/Text Message. After a sale is completed, a prompt will be displayed at the end of the sale to prompt whether or not the customer requires a digital receipt. If the customer requires a receipt, the Clerk/POS operator can either enter the Customer's Mobile Phone Number into the "Text Receipt to" field, or they have the option to enter the Customer's Email Address to have the receipt emailed.

In order to use this integration, you will need to have an account with Slyp and you will need to have the Slyp module licenced in the Idealpos Licence Gateway.

Go to Setup > Licence Gateway and ensure that Slyp appears on the current terminal as a licenced module.

If Slyp does not appear, please contact our Sales team and we will organise to have the Slyp module enabled in your licence. Once the module has been enabled in your licence, you will need to reload the licence in Idealpos by going to Setup > Licence Gateway > Reload

Once the Licence has been reloaded, you should see Slyp displayed in the list of modules that have been licenced for the current terminal.

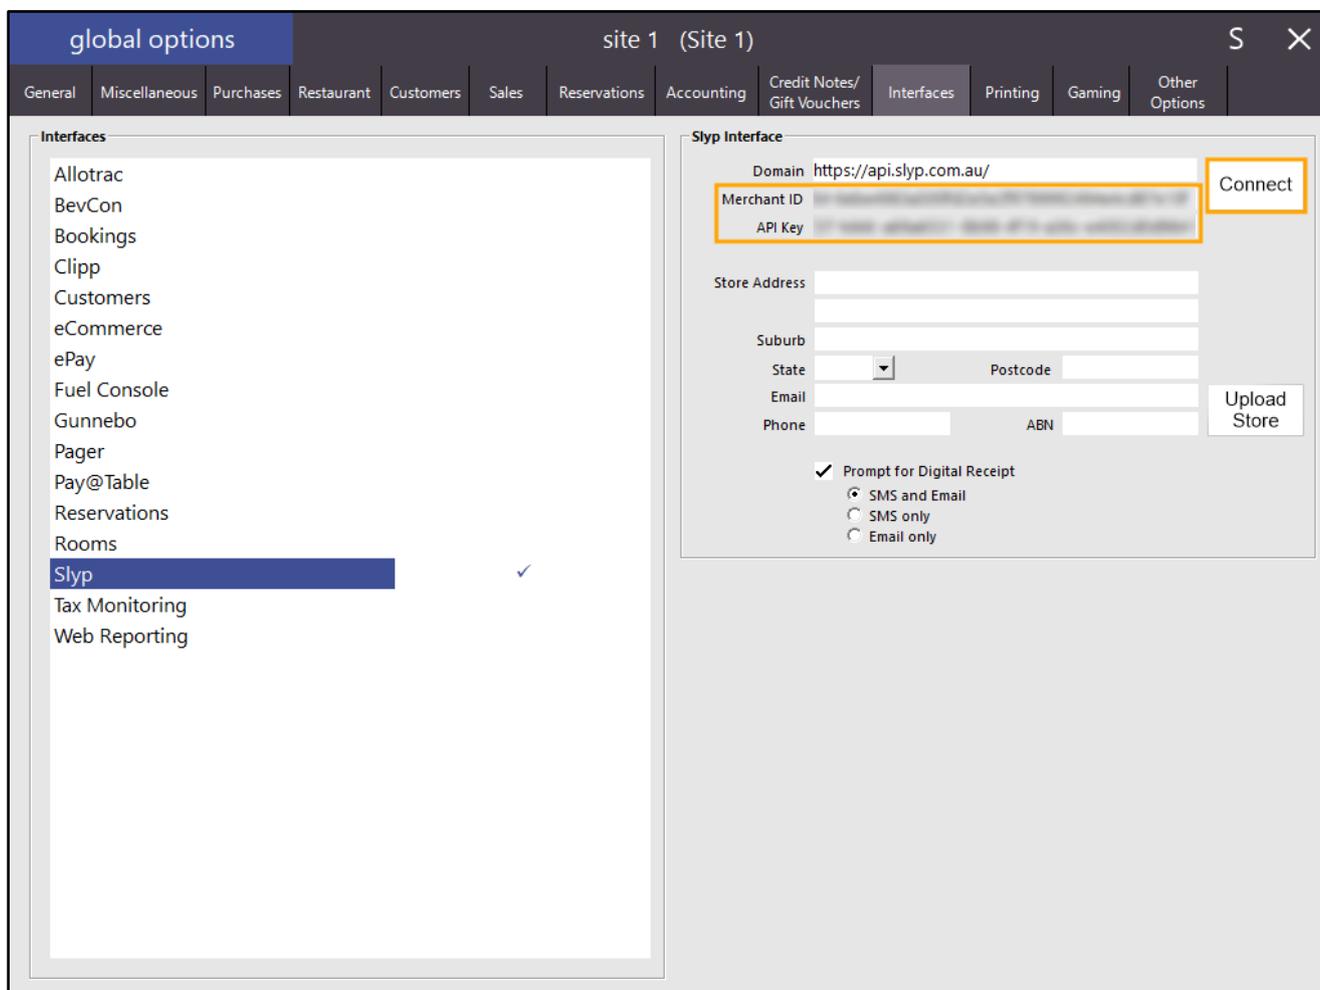

To ensure that the module has been applied, close and re-open Idealpos.

This can be done by opening IPSUtils, then press the "Close" button to close the Idealpos Suite.

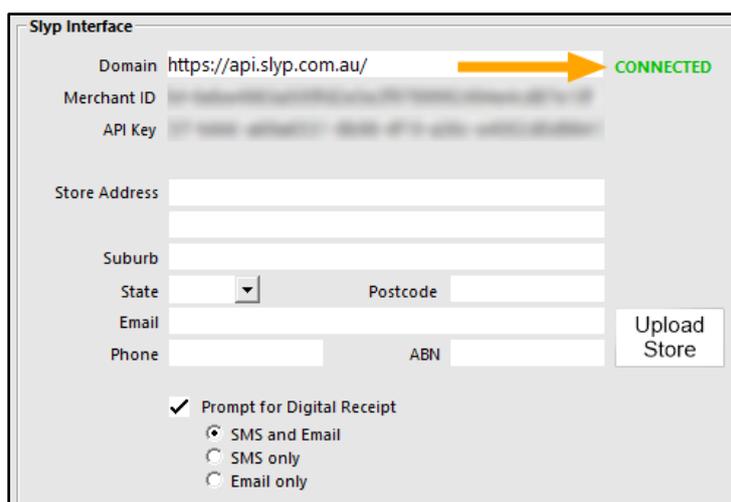

You may then start Idealpos by either clicking on the Idealpos shortcut on the Windows Desktop, or alternatively go to Start > Idealpos > Idealpos.

Once Idealpos has started, go to the Back Office dashboard and select Setup > Global Options > Interfaces. From the Interfaces screen, select Slyp, then enter the Merchant ID and API Key as supplied by Slyp. The default Domain of <https://api.slyp.com.au> should be sufficient, however, you may change it if required or requested by Slyp.

Once the details have been entered, press the "Connect" button.

After a successful connection has been established, the Connect button will be replaced with text that shows "CONNECTED" in green which indicates that the connection is now active.

# idealpos Update History

[Return to top](#)

The next step involves Uploading your Store Details and specifying your preference for the Digital Receipt prompt. The Store Details that are entered will be displayed on Digital Receipts that are sent to Customers.

Enter your Store Address details and set your preference for the Digital Receipt Prompt.

The "Prompt for Digital Receipt" checkbox will control whether a prompt for digital receipt is displayed at the end of the sale.

The options available as follows will control the fields that are available on the receipt prompt:

- SMS and Email – Selecting this option will allow the operator to enter either a Mobile Phone Number to SMS the receipt to or to enter an email address to email a copy of the receipt.
- SMS only – Selecting this option will only display a Mobile Phone Number field to SMS a copy of the receipt.
- Email only – Selecting this option will only display an Email field to send an email copy of the receipt.

Once these options have been configured, press the "Upload Store" button.

Connect with Idealpos Demo

Your company's/store's details that are displayed on the digital receipt (such as the company logo/header background colour, etc.) can be controlled by logging into the Slyph website using your details - <https://my.slyph.com.au/auth/signin> Once you have logged in, click on the Smart Receipt page from the left-hand side menu and adjust as required. Contact Slyph for more details regarding your account login details or changes to your digital receipt if you aren't sure.

---

## eCommerce Integration

### **Support for Idealpos Online Shopify Orders**

*Support for Idealpos Online Shopify Orders has been implemented in Build 8.*

*Note that the app is currently unavailable on the Shopify Marketplace.*

*Once the app is available on the Shopify Marketplace, we will publish a blog post onto our website and Social Media (Facebook, Twitter, etc.) with instructions on how to configure this integration!*

*Until such time, we can configure this integration for you via an Unlisted App; contact us for more details.*

# Inception Door Interface

The Inception Door Interface is an interface which connects to the Inception Controller/Inception Security System and is used for intruder detection, access control and automation.

This initial integration of the Inception Door Interface with Idealpos enables Idealpos to send a command to the Inception Interface to unlock a door. This can be used at venues such as tourist attractions or theme parks which have a specific area where visitors or customers are required to either purchase or scan a ticket to gain access.

In addition, this function can be utilised without a ticket and instead, a button can be created on the POS screen which will send a command to the Inception Door Interface to trigger a door to unlock, allowing a customer to gain entry.

For more information about the Inception System, visit: <https://www.innerrange.com/Products-Solutions/Inception>

The steps included below are based on the assumption that the Inception Controller/Inception Security System is already installed at the premises.

To configure and use this function, there are two parts to the configuration process.

The first part of the process involves the configuration of the Inception Door Interface, and the second part of the process involves the configuration of Idealpos so that the Open Door command can be sent to the door to unlock/open it.

Firstly, complete the configuration of the Inception Door Interface as follows:

Connect to the Inception Controller via a Web Browser.

The Inception Controller can be accessed by visiting:

<https://skytunnel.com.au/inception/SERIALNUMBER>

Substitute SERIALNUMBER in the above URL with the Serial Number of your Inception Controller Device.

A Web Interface login screen will be displayed.

Enter the Username and Password to login:

inception

Login to Inception

# idealpos Update History

[Return to top](#)

Once logged in, a connection will need to be created for Idealpos to connect to the Inception Controller. Using the menu on the left-hand side, go to: Configuration > General > Connections:

Press the "Add" button located at the top of the window to add a new Connection:

Configure a new Connection as follows:

## General

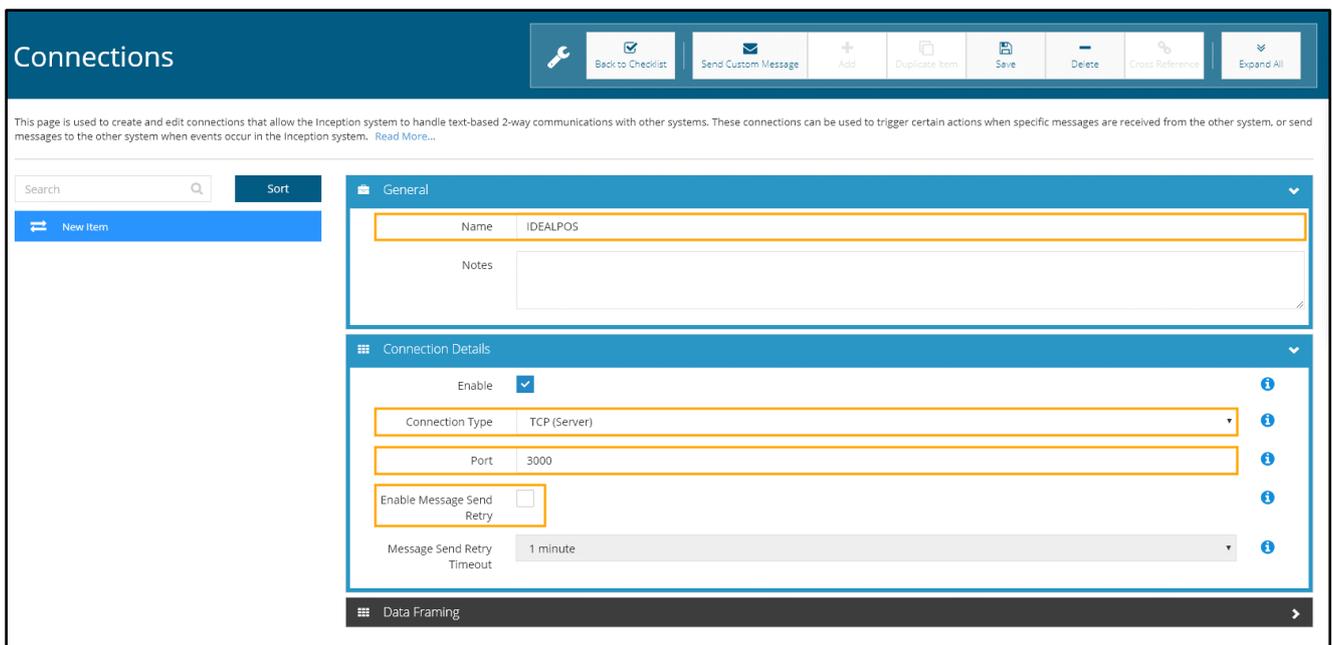

Name: **IDEALPOS**

## Connection Details

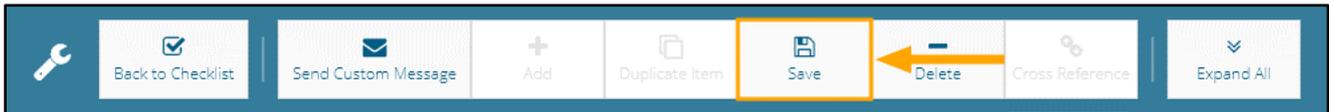

Connection Type: **TCP (Server)**

Port: **3000**

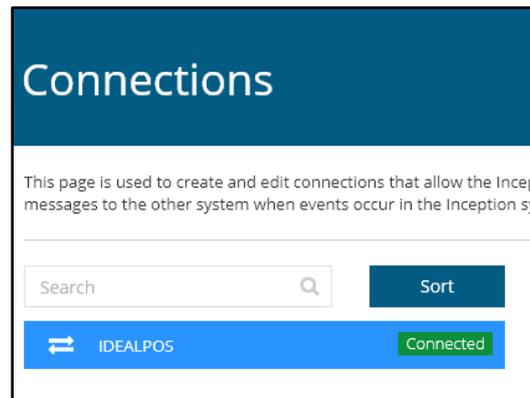

Enable Message Send Retry: **Unticked**

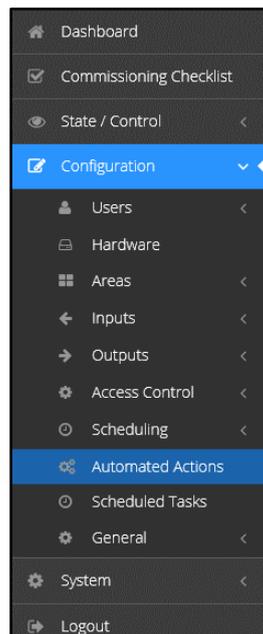

Once the above details have been entered, press the “Save” button from the buttons displayed at the top of the browser window:

After saving, the newly created connection will be displayed on the left-hand side of the window below Connections as per the below example:

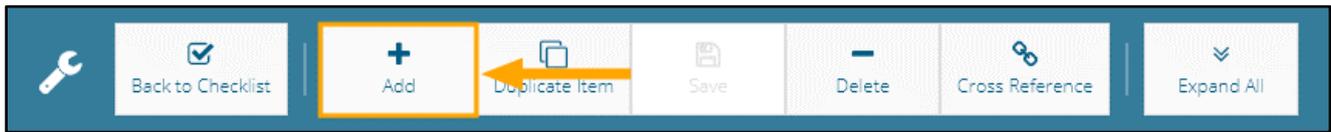

The next step involves creating an Automated Action.  
To create an Automated Action, use the menu on the left-hand side to go to:  
Configuration > Automated Actions

# idealpos Update History

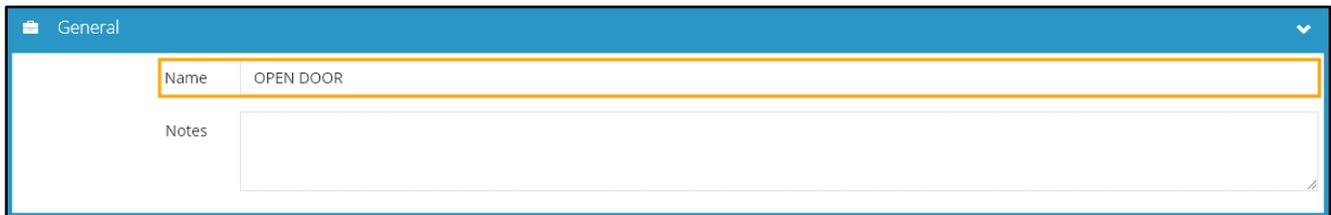

[Return to top](#)

After selecting the Automated Actions option from the menu, press the "Add" button located at the top of the window to add a new Automated Action:

## General

In the Name field, enter "OPEN DOOR"

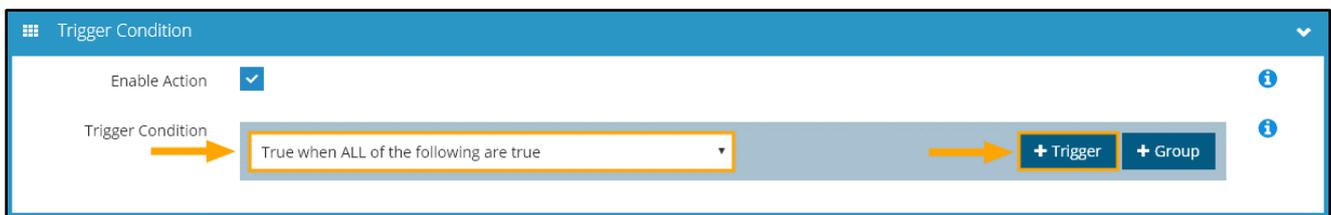

## Trigger Condition

Configure the Trigger Condition as follows:

Enable Action: **Enabled**

Trigger Condition: **True when ALL of the following are true**

Then press the "+ Trigger" button to add a new trigger.

Configure the Trigger Condition as follows:

Select an item type to base this trigger on: **Connection**

Select an item: **IDEALPOS**

Is/Is Not: **Is**

State: **Received Message**

Message: **DOOR**

Once configured, press the "Confirm" button to save the Trigger Condition:

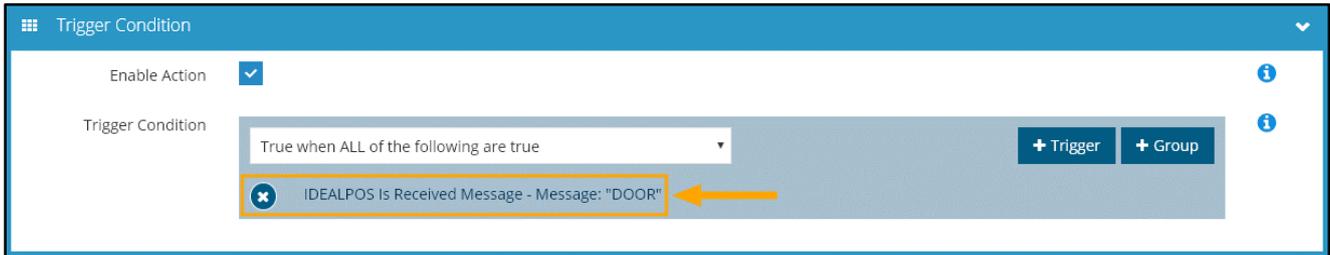

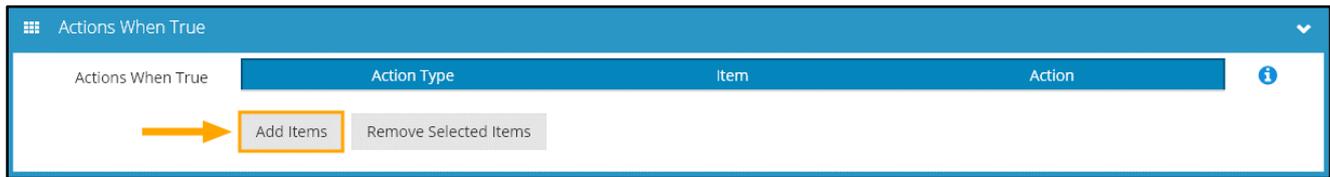

# idealpos Update History

[Return to top](#)

After pressing "Confirm", the Trigger Condition will be displayed under the Trigger Condition section of the Automated Action screen as per the below example:

An Action needs to be created for the Trigger Condition. Under the "Actions When True" section, press the "Add Items" button:

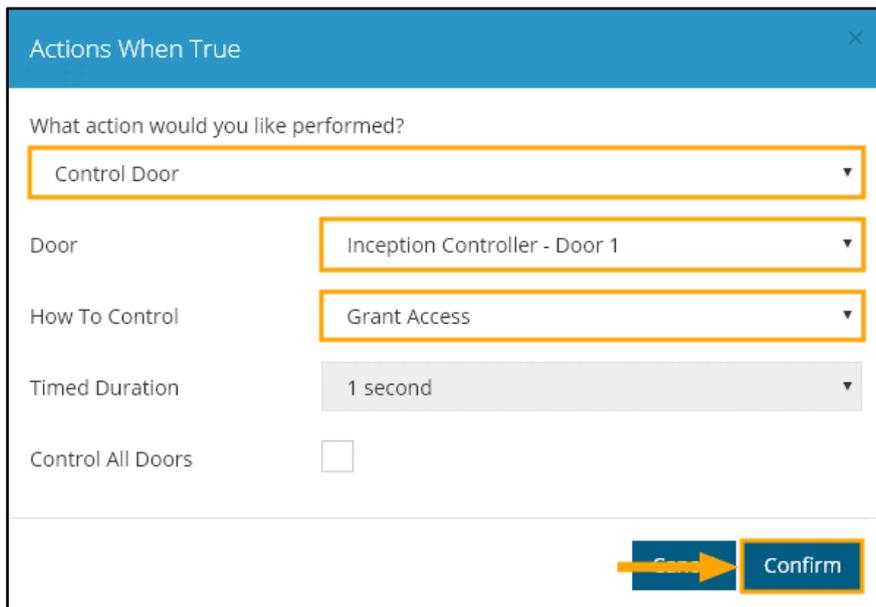

Configure the Actions When True as follows:

What action would you like performed: **Control Door**

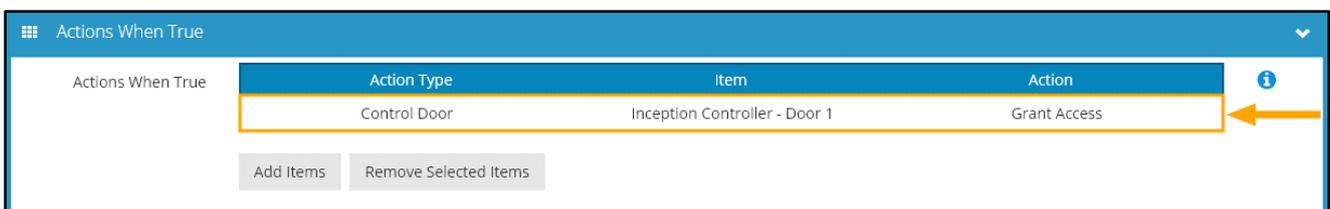

Door: **Inception Controller – Door 1** (or alternatively, select the Door that you want to control)

How To Control: **Grant Access**

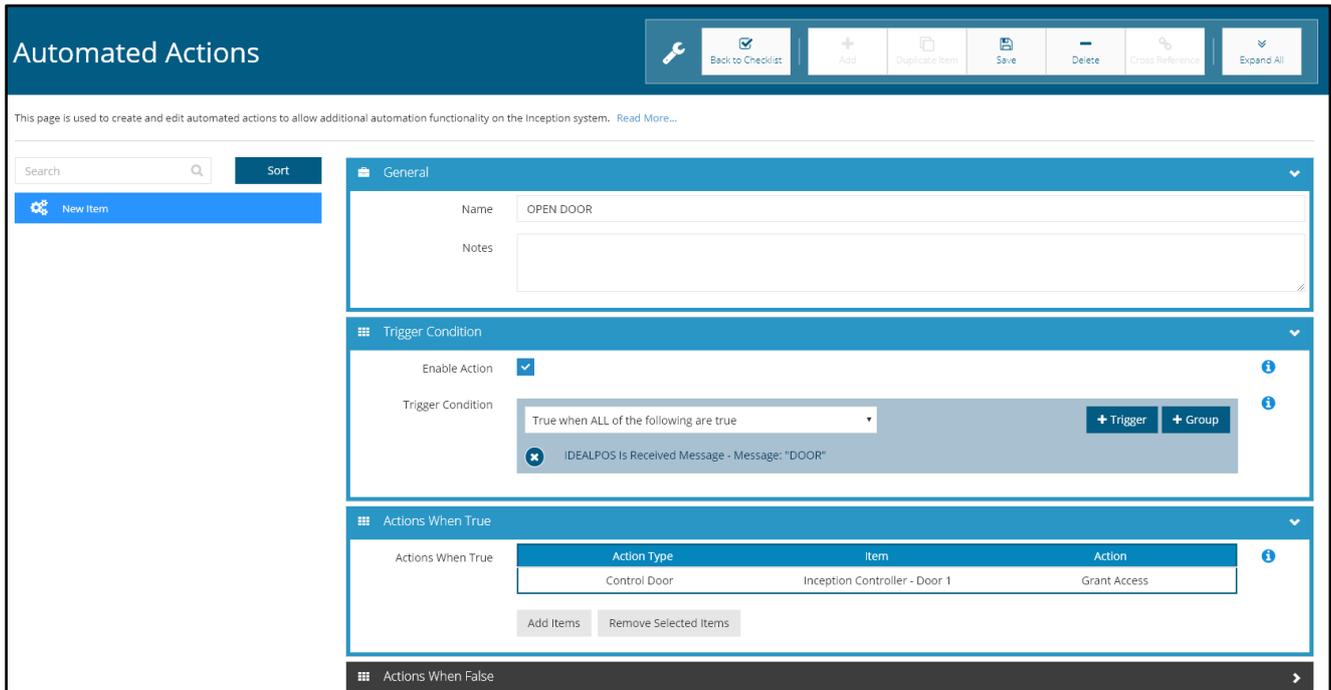

Press "Confirm" to save the action.

After the action has been saved, it will appear within the "Actions When True" section as per the below example:

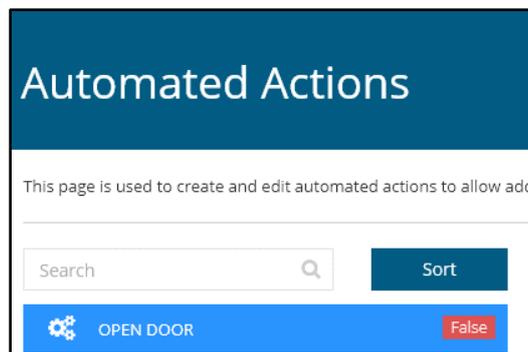

Once all the above settings have been entered into the "Automated Actions" page, the "Automated Actions" window should appear similar to the below:

To save the Automated Action, press the "Save" button at the top of the window.

After saving, the newly created Automated Action will be displayed on the left-hand side of the window below Automated Actions as per the below example:

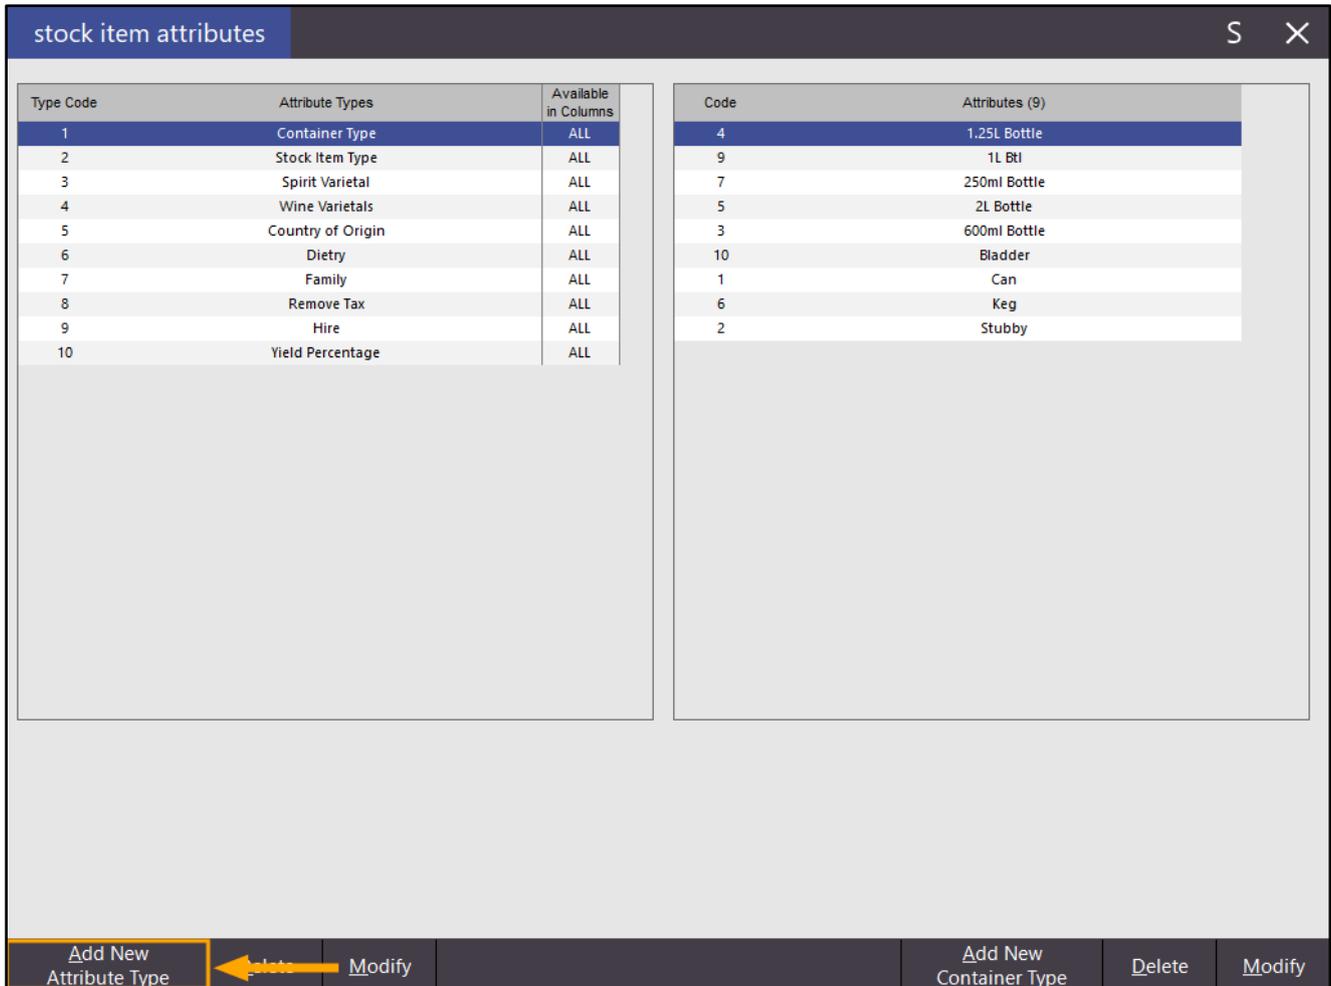

# idealpos Update History

[Return to top](#)

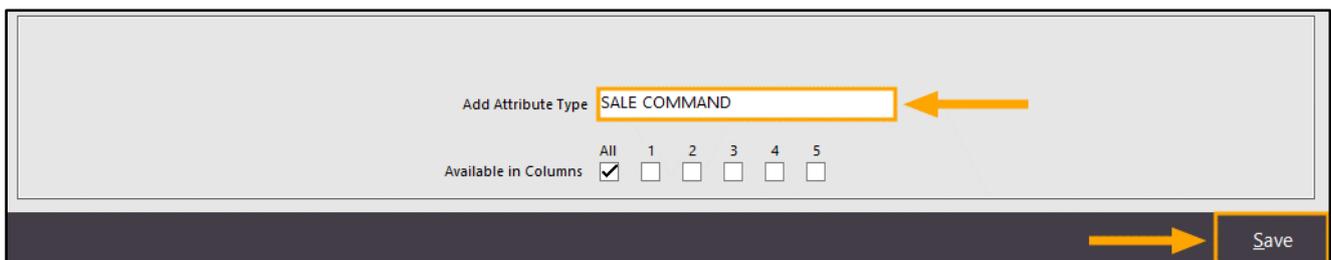

The next portion of the configuration involves the setup of Idealpos so that the Open Door command can be sent to the Inception Controller.

Open Idealpos and go to: File > Sales > Stock Item Attributes

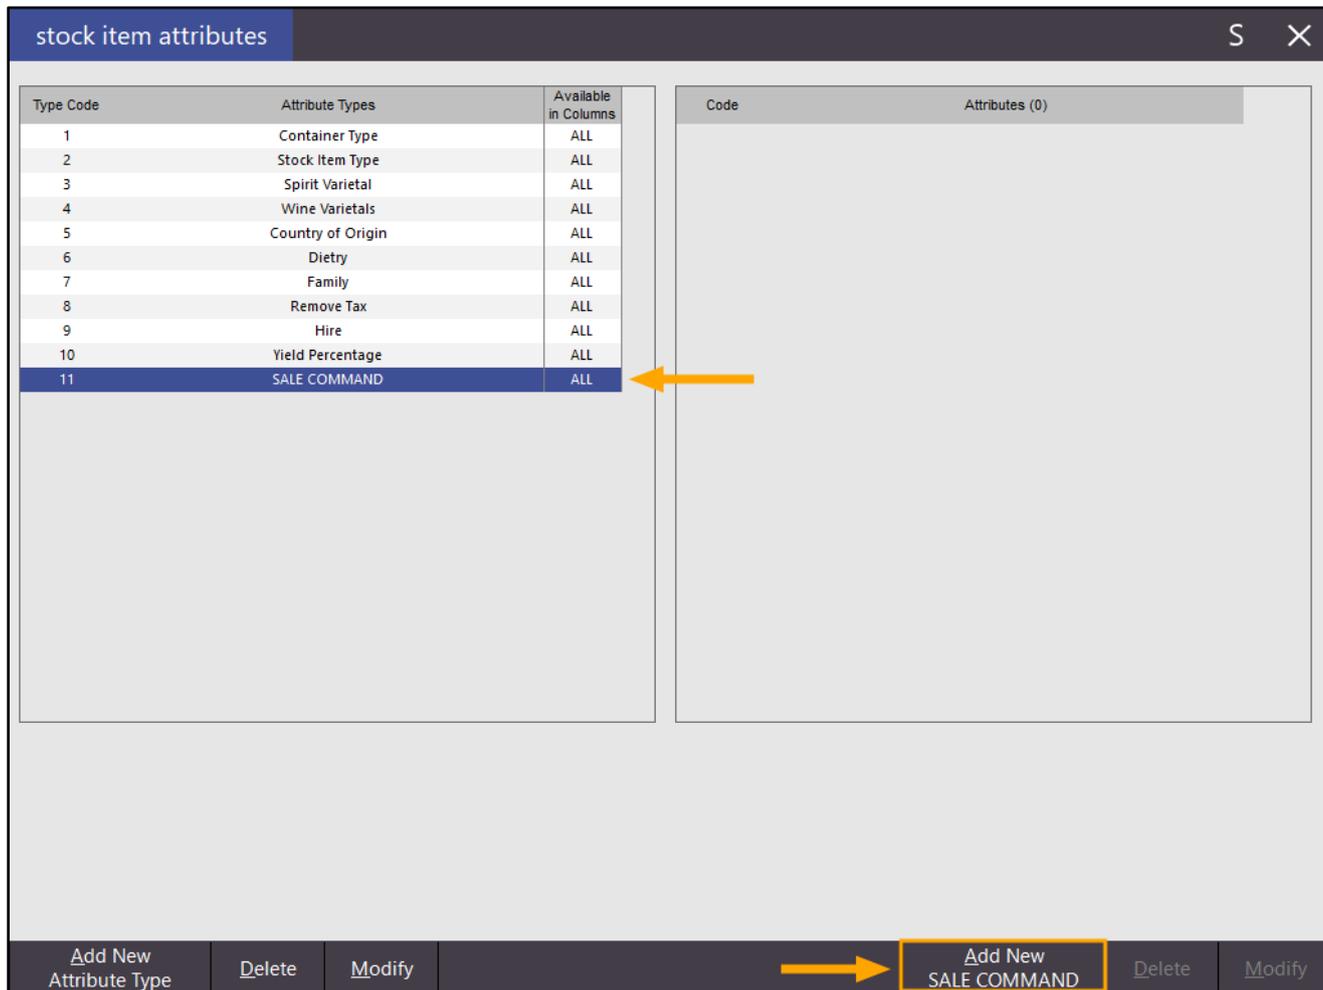

Choose "Add New Attribute Type" from the bottom-left corner of the window:

Add a New Attribute Type: **SALE COMMAND** (the Attribute Type can be given any name, but for the purposes of setting up and demonstrating this function, we will use SALE COMMAND)

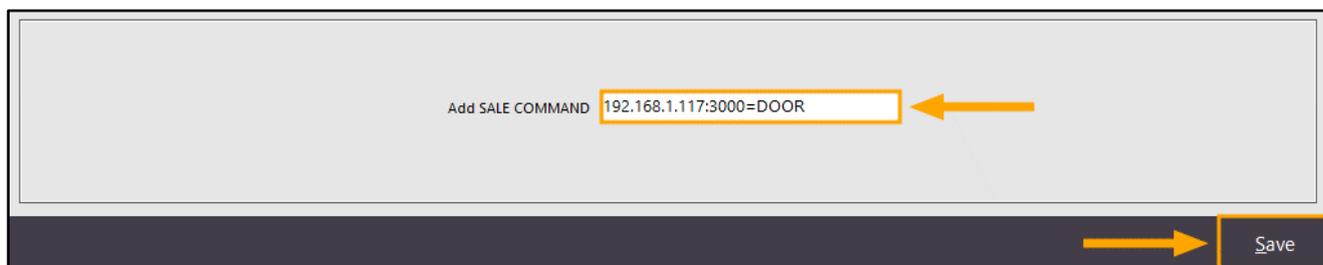

After the Attribute Type has been added, press the "X" on the top-right corner of the window, then select the "SALE COMMAND" Attribute Type from the list and press the "Add New SALE COMMAND" button.

Enter the command in the format of:  
IPADDRESS:PORT=DOOR

If the IP address is 192.168.1.117 and the Port Number is 3000 (this is the Port Number that was configured earlier in the above steps), the Sale Command will need to be entered as:  
192.168.1.117:3000=DOOR

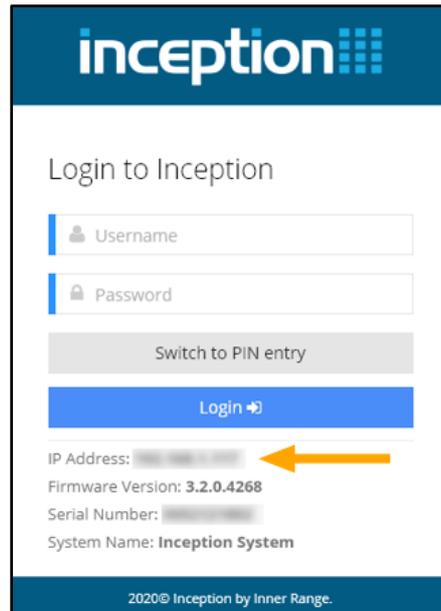

This is demonstrated in the below example.  
Once entered, press the "Save" button.

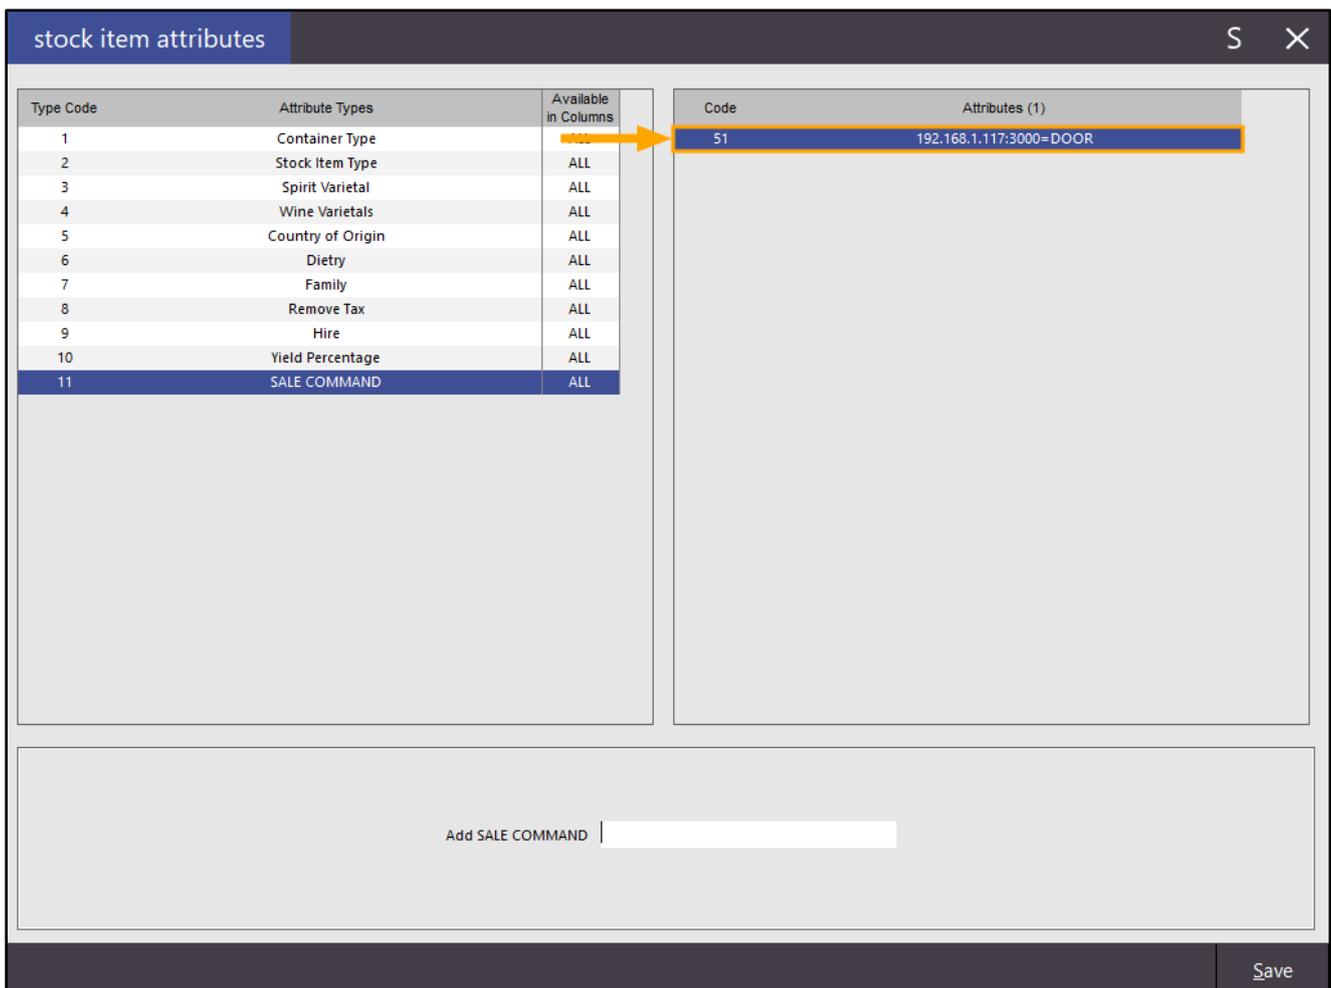

# idealpos Update History

[Return to top](#)

If you are unsure about what the IP Address of the Inception Controller is, this can be found on the Inception logon screen by opening <https://skytunnel.com.au/inception/SERIALNUMBER>  
Substitute SERIALNUMBER in the above URL with the Serial Number of your Inception Controller Device:

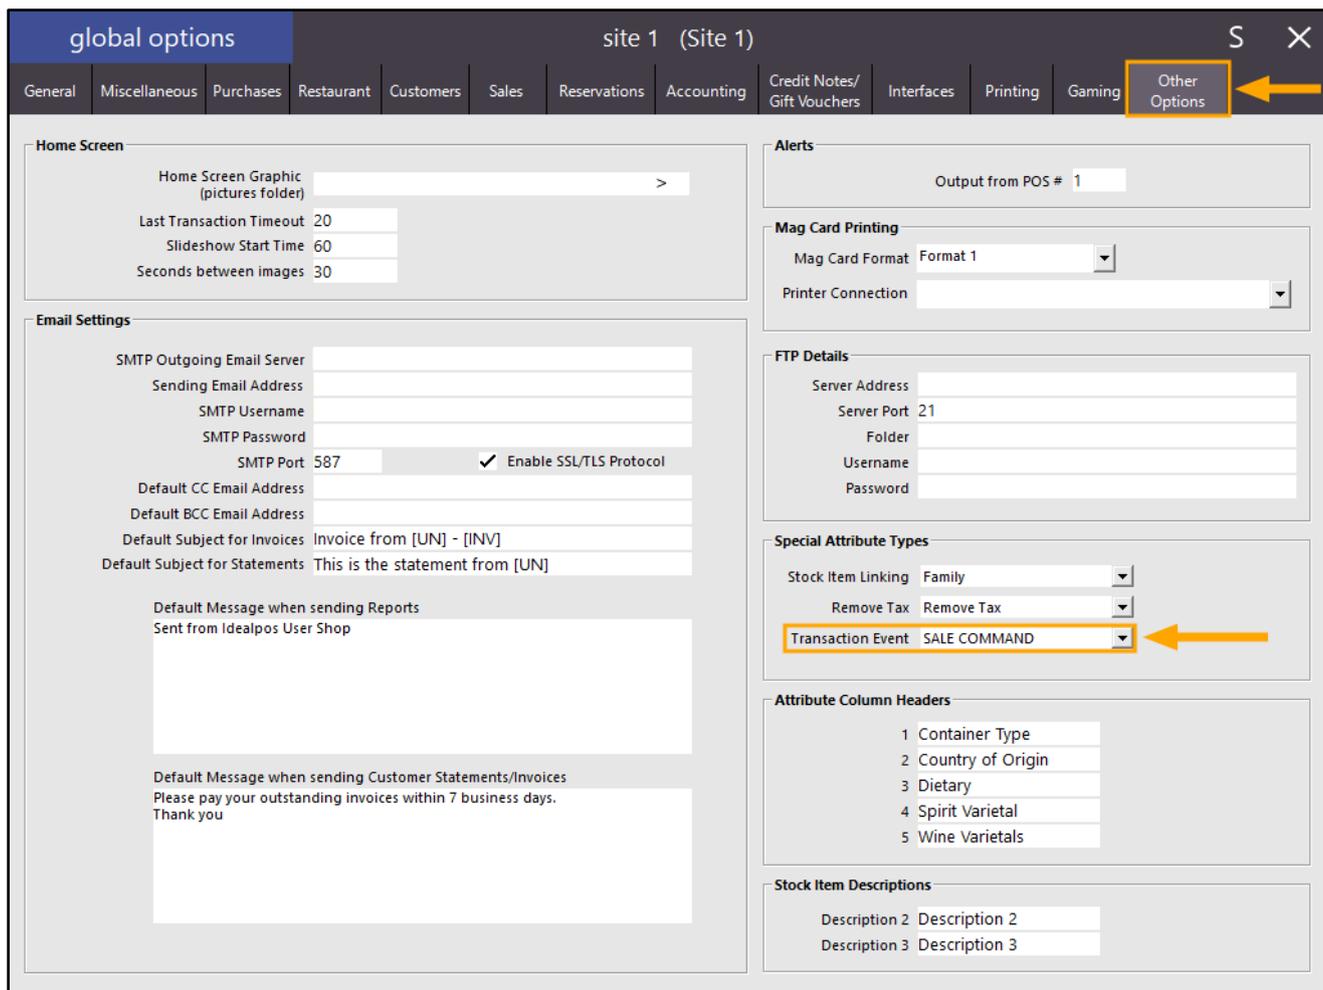

Once the Sale Command has been saved to the Stock Item Attributes, it should appear similar to the below example:

Close the Stock Item Attributes window, then go to: Setup > Global Options > Other Options

Under Special Attribute Types, select the "SALE COMMAND" Attribute Type from the Transaction Event Dropdown box:

Once the Transaction Event has been set to SALE COMMAND, close the Global Options window.

# idealpos Update History

[Return to top](#)

In order to send the Sale Command to the Inception Controller, the SALE COMMAND Attribute Type and the DOOR Attribute will need to be assigned to a Stock Item which will trigger the command when a sale containing the Stock Item is finalised.

Go to File > Stock Control > Stock Items

Press the "Add" button on the bottom-right corner of the screen to add a new Stock Item.

Create the Stock Item and enter the details as required.

The Stock Item Description can be entered as anything you require but for demonstrating this function, we have used a description of OPEN DOOR.

If Customers are required to pay to enter through the door, you may also enter a Sell Price for the Stock Item.

Once the Item has been created as required, take note of the Stock Code then press "Save" on the bottom-right corner of the window.

**stock items** | General | Advanced | Indirect Item | New Item X

SALE COMMAND | 192.168.1.117:3000=DO +

Keyboard | Save

A button on the POS Screen can also be created for the item which can be used to open the door. Note that you have a few options when creating the button as follows:

1. Create a button that calls the "Macro" function to add the Open Door item to the sale, go to the tender screen and finalise the sale all with the push of a single POS screen button. This may be useful in environments where the Sell Price of the Open Door item is zero and the door needs to be opened frequently without the purchase of any other items. Note however that using this method in the middle of a sale will result in the sale being finalised using cash.
2. Create a button that adds the item to the sale via the "Stock Item". This will simply add the item to the sale and the clerk will need to press the Enter button on the screen to proceed to the Tender screen, then finalise the sale by selecting a Tender from the list.

To create a button on the POS Screen, go to:  
Setup > POS Screen > POS Screen Setup > Select the Layout > Buttons

Navigate to a POS Screen tab that you want the button to be created on and select it.  
Find a blank unused button and click on it.

### Using the "Macro" function to open the door:

If you want to use the Macro method from point 1 above to open the door, select "Macro" from the Function List, then enter the following Automatic Text, ensuring that you substitute StockCode with the actual Stock Code of your Open Door Item:

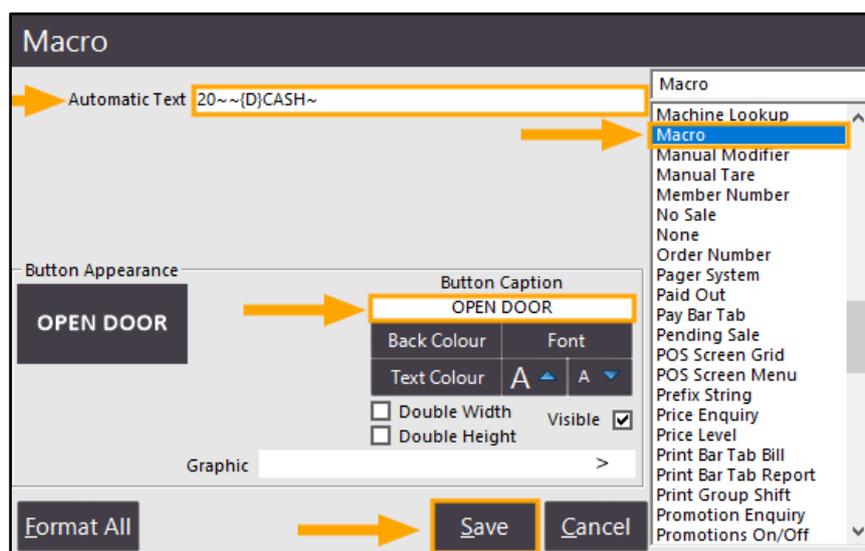

StockCode~~{D}CASH~

For the demonstration of this function, the Stock Item "OPEN DOOR" that was created earlier above had a Stock Code of 20. So, the Automatic Text to enter when using the Macro function will be:  
20~~{D}CASH~

Take note that this may vary with your setup (e.g. If you have any prompts that appear before the Tender screen is displayed, an additional Enter "~" character may be required to dismiss them).

The way the Macro will work is as follows:

- The Stock Code will be entered first, followed by the Enter key (which will add the item to the sale).
- The Enter key will be pressed again which will trigger Idealpos to display the Tender screen.
- A short delay {D} will occur.
- The text CASH will be entered into the tender field to indicate that the sale will be finalised using the Cash Tender.
- The Enter key will be pressed and this will trigger the sale to be finalised.

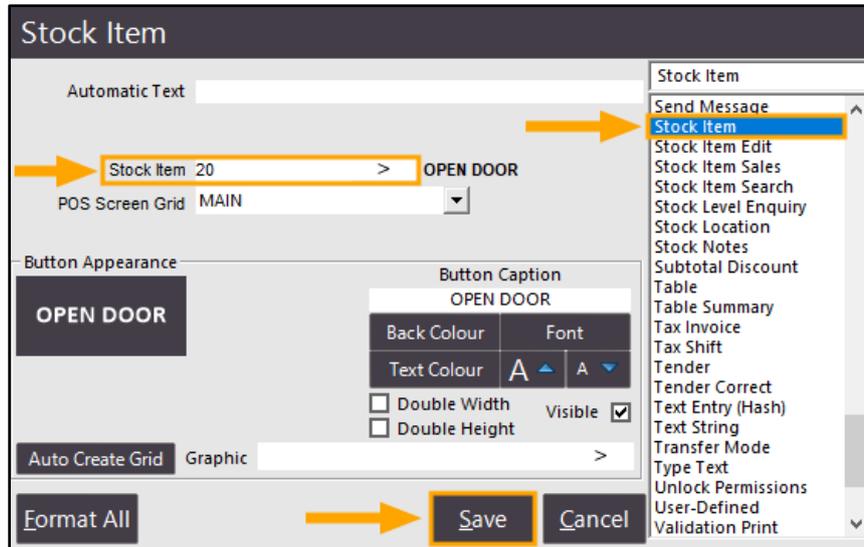

# idealpos Update History

[Return to top](#)

## Using the "Stock Item" function to open the door:

If you want to use the Stock Item function from point 2 above to open the door, select "Stock Item" from the function list. Then either enter the Stock Code into the Stock Item field, or press the ">" button within the Stock Item field and search for the "Open Door" item from the Stock Item List.

Finally, press "Save" to save the button.

Once the button has been created, close the POS Screen Layout window, then press the "POS" button from the dashboard.

Select the POS Screen tab which the button was created on, then press the button.

If using the Macro method, the item will be added and the sale will be finalised automatically. Immediately after the sale is finalised, the door will be unlocked/opened.

If using the Stock Item function to add the item to the sale, you will need to press the ENTER button, then select a Tender from the list. After selecting a tender, the door will be unlocked/opened.

# Kitchen Printers

## Handheld / eCommerce Only Option for Kitchen Printers

This function adds the ability to configure a Kitchen Printer to only print orders when they have been received from Handheld or eCommerce orders. An example of a situation where this function could be utilised includes sending an order for a Cappuccino from the Handheld app to the Kitchen compared to placing an order for a Cappuccino from the POS Terminal.

When serving a customer at the table of the Restaurant and they order a Cappuccino, the Clerk is away from the POS Terminal and having the order print to the Kitchen will aid in the process of ordering the Cappuccino, whereas if the order is placed from the POS Terminal by the Clerk, the Clerk may be in close proximity to the Kitchen and they can verbally request the Cappuccino be prepared, saving on receipt rolls. The Clerk serving the Customer at the POS Terminal may also be the barista who will prepare the Cappuccino, reducing the need to print the order to the Kitchen Printer.

To configure and use this function, go to: Setup > POS Terminals > Select Terminal > Modify

Navigate to the Kitchen Printers tab, then select the Kitchen Printer that you want to apply the setting to.

Finally, toggle the "Handheld / eCommerce Only" checkbox.

When the checkbox is disabled, orders that are sent to the selected Kitchen Printer from Idealpos, Handheld or eCommerce will result in the Kitchen Receipt being printed.

When the checkbox is enabled, only orders that are sent to the selected Kitchen Printer from Handheld or eCommerce will result in a Kitchen Receipt being printed (i.e. orders placed from Idealpos will not be printed to the Kitchen Printer).

The screenshot shows the 'pos terminals' configuration window with the 'Kitchen Printers' tab selected. The interface includes a navigation bar at the top with tabs for 'Main Settings', 'POS Settings', 'Receipt Printer', 'Kitchen Printers', 'Display / Kiosk', 'Customer Readers', 'Other Peripherals', 'EFTPOS Settings', 'Import / Export', and 'Miscellaneous Settings'. The 'Kitchen Printer' section contains a dropdown menu set to 'KP 1 : KITCHEN'. Below this, there are fields for 'Type' (set to 'None') and 'Connection' (set to 'None'), along with a 'Test' button. A list of checkboxes includes 'Stock Items Print Double Width', 'Stock Items Print Double Height', 'Stock Items Print Bold', 'Stock Items Print Above Header', 'Expanded Printing', 'Print Extra Copy', 'Activate Beeper', 'One Item per Docket', and 'Handheld / eCommerce Only' (which is checked). At the bottom, there is a 'Zebra Labels' dropdown and an 'Empty Lines' field set to '0'. A 'Keyboard' section is visible at the very bottom of the window.

## Labels

### 70 x 25mm Continuous Labels – Shelf Labels Small Font

This function adds the ability to select the font size printed on Shelf Labels when Outputting to Idealpos Continuous Labels with the Dimensions of 70mm x 25mm. The size of the font is controlled via the Design Dropdown box.

The Font Size that was previously printed on Shelf Labels will continue to be used when the “**Shelf Labels**” option is chosen from the Design dropdown box.

The new Small Font Size can be printed on Shelf Labels by selecting the “**Shelf Labels Small Font**” option from the Design dropdown box. **The Small Font option is only available for the label dimensions 70mm x 25mm.**

To configure and use this function, go to: Utilities > Labels

Set and configure the dropdown boxes as follows:

**Data Type:** Stock Items.

**Output To:** Idealpos Continuous Labels.

**Continuous Printer:** [Select your Continuous Label Printer from the dropdown box].

**Dimensions:** 70mm x 25mm.

**Design:** Shelf Labels Small Font (new small font size introduced with this change)/Shelf Labels (old large font size).

**Price Level:** Select the Price Level that you want to be used when printing the Shelf Labels.

**Top Margin/Left Margin:** Enter a value to specify the position of the labels. Trial and error may be required to determine the correct values for your printer and label stationery.

**Start Position:** Set which position the labels from the current selection will print from.

**Use Stock Code as Barcode:** Enabling this option will generate the barcode on the labels using the Stock Item Code.

**Show Print Dialog Box:** Ticking this option will cause the Print Dialog box to appear when printing labels.

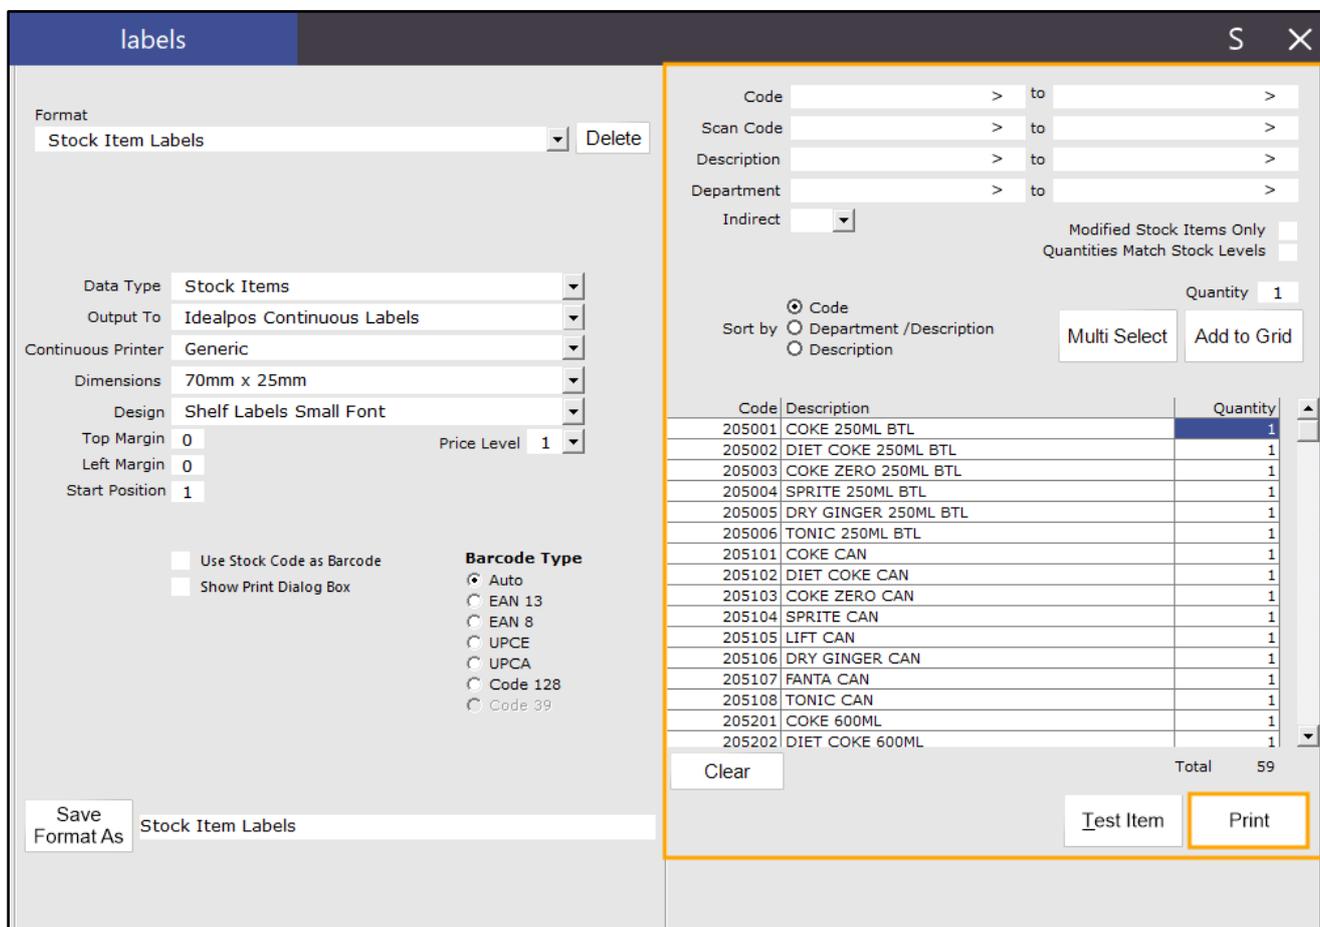

**Barcode Type:** Select the Barcode Type from the list. The selected Barcode Type will be printed on the Labels.

**Save Format As:** If you want to save this format for later use without having to re-enter the above settings, enter a name for the format then press the “Save Format As” button. The format will be added to the list of available formats displayed at the top of the screen. When the saved Format is selected, the above settings will be pre-filled.

Code	Description	Quantity

Once the Label Format Settings have been entered and the Format Saved, Labels can be generated using the format. From the Right-Hand side of the labels window, you have option to either enter the criteria required for the labels to generate, then press the "Add to Grid" button to add the items that fall within the entered criteria to the list of labels below. Alternatively, you can use the "Multi Select" button to display the Stock Items search screen which can then be used to search and select items to generate labels for. When using Multi Select, multiple Stock Items can be selected by holding down the CTRL key on your keyboard, then select the next item from the list. Repeat this until the required Stock Items have been selected, then press "OK" to add them to the list of labels to be generated.

After the items have been selected, they will appear in a list similar to the below example:

Once you're happy with the list of items displayed, press the "Print" button and they will be printed to the Continuous Label Printer.

It should be noted that in your first print using the new format, you may want to sample the style by only printing a handful of Stock Item labels to ensure that they print out as expected and to minimise label wastage in the event the labels do not print as expected (e.g. Top/Left margin adjustments may be required, etc.).

## POS Screen

### Scanning existing Pending Sale adds into Current Sale

This function enables the ability to scan an existing Pending Sale Code when Items have already been added to the current sale; the items from the existing Pending Sale will then be added to the bottom of the current sale. Previous to this change, a Pending Sale Code had to be scanned prior to adding any items to the sale and once the Items from the Pending Sale Code were added, additional items could then be added to the sale. After this change, it is now possible to either scan a Pending Sale Code into a blank sale screen or a sale screen that already contains items that have been added.

There are no additional steps required to enable the scanning of a Pending Sale Code to add items to the current sale. Idealpos has simply been updated to allow the Pending Sale Code to be scanned either before or after Items have been added to the sale.

Before setting up Pending Sales, POSServer must be enabled.

For more details about setting up POSServer, refer to the [POSServer topic](#) in the User Guide.

Once POSServer has been configured, ensure that POSServer is enabled in Setup > Global Options > Miscellaneous. Refer to the [Miscellaneous Global Options Topic](#) in the User Guide for more details.

To configure and use this function, go to:

Setup > Global Options > Sales > Pending Sales

Ensure that the following checkboxes are enabled:

- Auto Generate Pending Sale Codes
- Print to Docket Printers

The screenshot shows the 'global options' window for 'site 1 (Site 1)'. The 'Sales' tab is selected. The 'Pending Sales' panel is highlighted with a yellow box, and an arrow points to the 'Auto Generate Pending Sale Codes' checkbox, which is checked. Other options in the panel include 'Printed Pending Sales are sent to Receipt Printer', 'Printed Pending Sales are sent to Windows Printer', 'Inhibit Amounts on A4 Windows Prints', 'Print to Docket Printers', and 'Print to Windows Printer'.

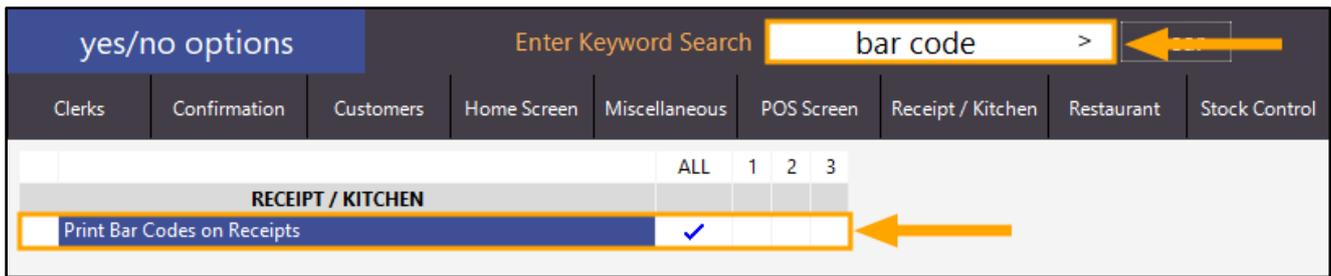

Default	Description	Rate	Label
Rate 1	<input checked="" type="radio"/> GST	10.00	GST
Rate 2	<input type="radio"/> STT	6.000	FRE
Rate 3	<input type="radio"/> ECAL	10.00	F
Rate 4	<input type="radio"/> Not Defined	0.000	
Rate 5	<input type="radio"/> Not Defined	0.000	
Rate 6	<input type="radio"/> Not Defined	0.000	

Price	Description	Type	Text
1	Damaged	<input type="checkbox"/>	
2	Changed Mind	<input type="checkbox"/>	
3	Faulty	<input type="checkbox"/>	
4	Product Recall	<input checked="" type="checkbox"/>	
5	Expired	<input type="checkbox"/>	
6	Other	<input checked="" type="checkbox"/>	
7	Test	<input type="checkbox"/>	
8		<input type="checkbox"/>	
9		<input type="checkbox"/>	

Close the Global Options window, then go to: Setup > Yes/No Options

Enter Keyword Search: bar code

Enable "Print Bar Codes on Receipts"

Close the Yes/No Options window to save the change.

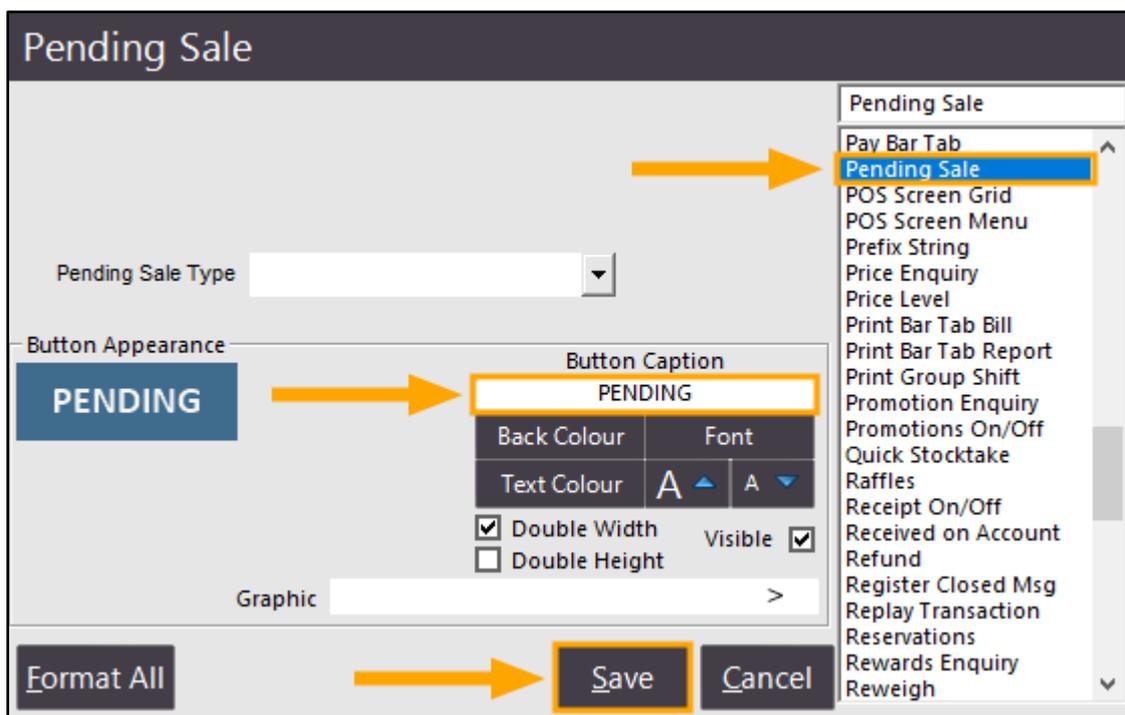

A Pending Sale button also needs to exist on the POS Screen in order to use the Pending Sale Function.

Go to:

Setup > POS Screen > POS Screen Setup > Select a POS Screen Layout > Press "buttons" on the bottom-left corner

Ensure that a Pending Sale button exists on the POS Screen.

If a Pending Sale button does not exist, click on a blank/unassigned button and select the "Pending Sale" function to create the button:

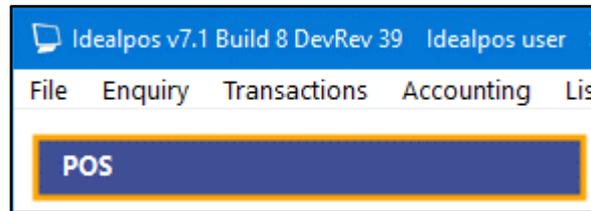

# idealpos Update History

[Return to top](#)

Close the POS Screen Layout windows.  
Pending Sales are now ready for use.

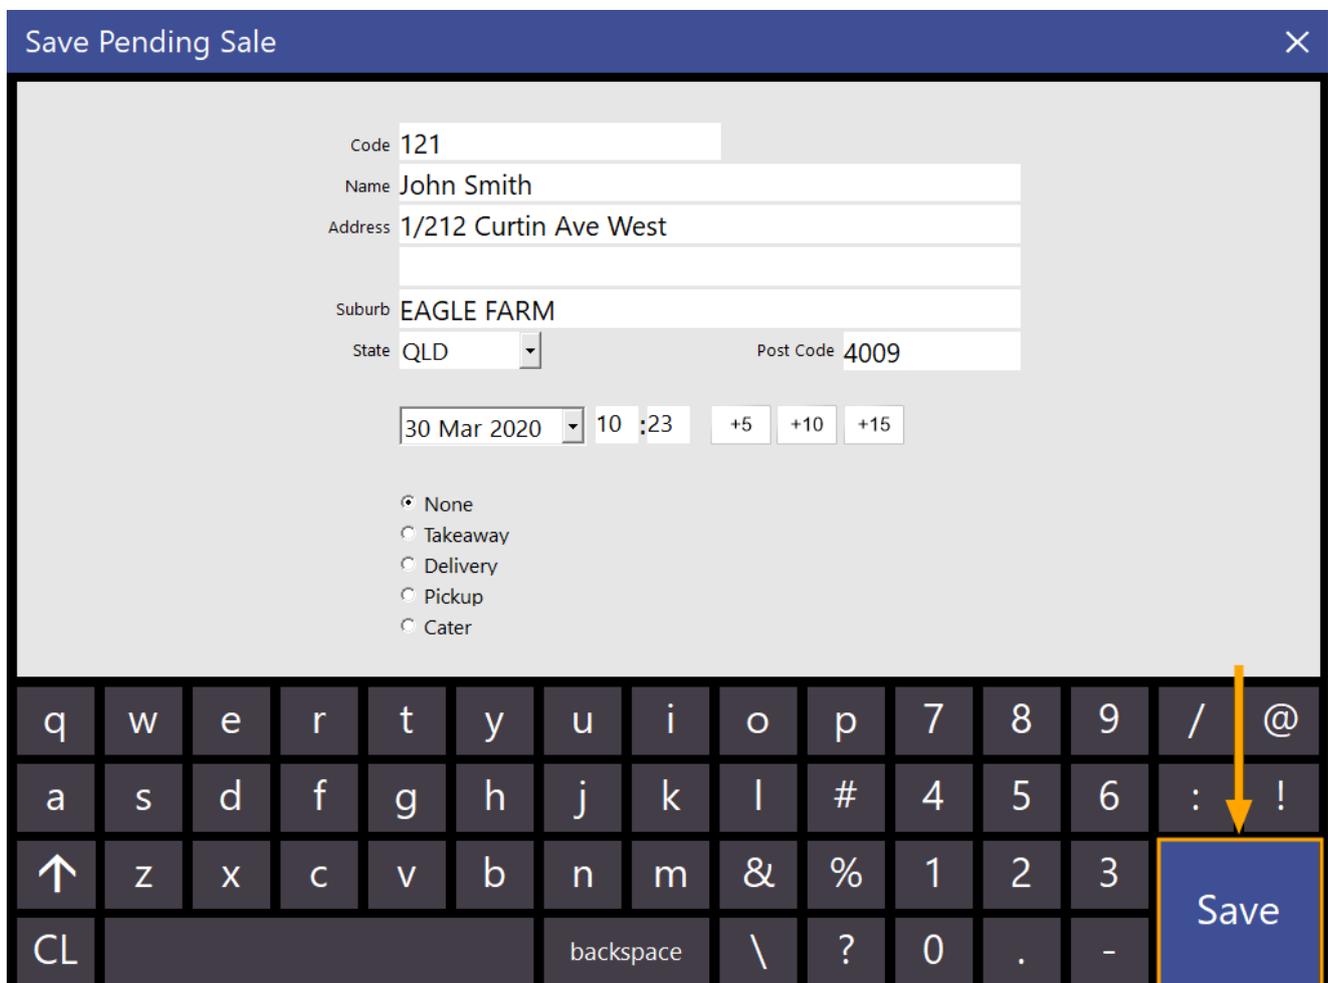

Open the POS Screen from the Back-Office Dashboard:

Add Items to the sale, then press the "Pending" button.

If required, fill in the required details then press the "Save" button to save the Pending Sale.  
Entering details (Customer Name and Address) is optional, but may be useful for identifying a Pending Sale at a later time or date.

A screenshot of the 'Save Pending Sale' dialog box. The form contains the following fields: Code (121), Name (John Smith), Address (1/212 Curtin Ave West), Suburb (EAGLE FARM), State (QLD), and Post Code (4009). There is also a date and time field showing '30 Mar 2020 10:23' and three radio buttons for 'None', 'Takeaway', 'Delivery', 'Pickup', and 'Cater'. A virtual keyboard is overlaid at the bottom, with the 'Save' button highlighted in a blue box. A yellow arrow points from the top right of the keyboard area down to the 'Save' button.

A Pending Sale will be created and a Pending Sale Code will be printed at the bottom of the Pending Sale receipt. The Pending Sale can be resumed by scanning the Pending Sale Code.

The Pending Sale Code can either be scanned before any items have been added to the sale, or the Pending Sale Code can be scanned after Items have been added to the sale. If scanning the Pending Sale Code after items have been added, the items from the existing Pending Sale will be added below the items that have been added to the sale.

Alternatively (if you don't have a scanner connected to the POS terminal), the Pending Sale can be added to the sale screen by manually entering the Pending Sale Code. This can be done by entering the Pending Sale Code into the POS Screen using the format P[PendingSaleCode]-1

Example: If the Pending Sale Code is 121, this would be entered as:  
P121-1

This can be entered using the Text String function.

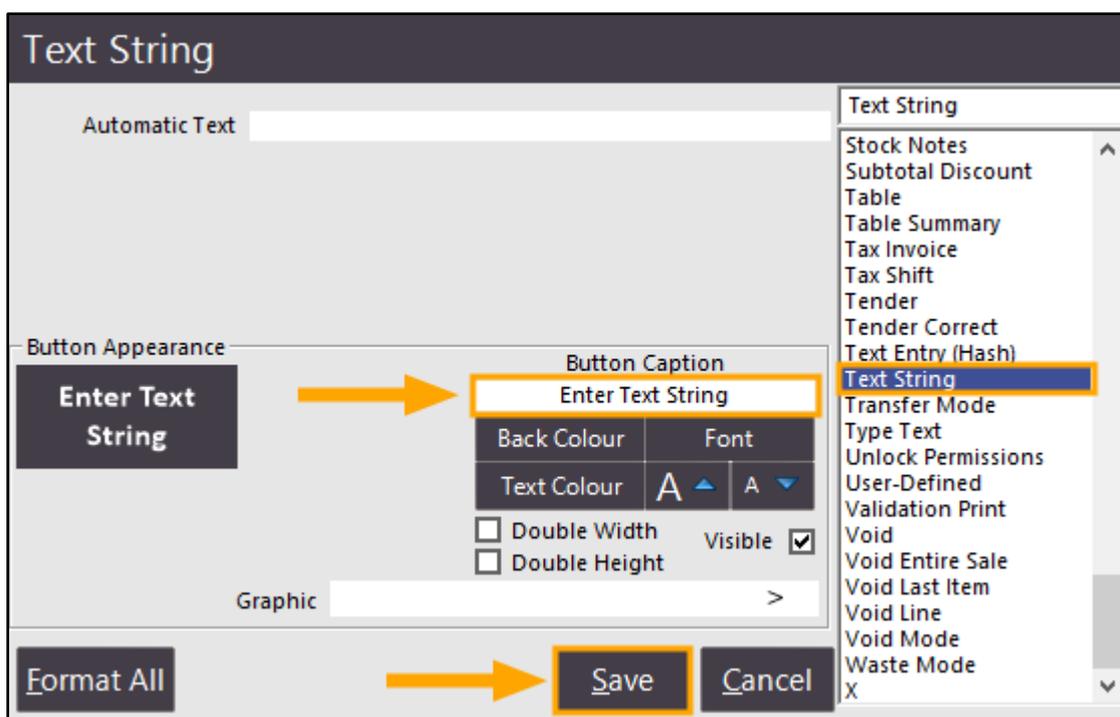

A button on the POS Screen can be created to utilise this function.

Go to:

Setup > POS Screen > POS Screen Setup > Select POS Screen Layout > Press "Buttons" on the bottom-left corner

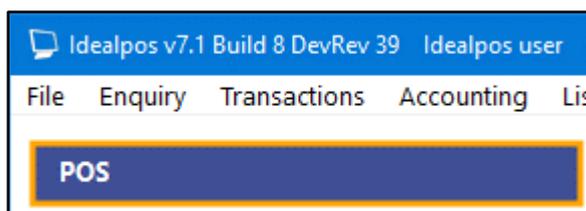

Find an unused/blank button and click on it.

From the list of available Functions, select "Text String", configure the Button Caption as required, then press the "Save" button to save the change.

Close the POS Screen Layout windows.

From the Back-Office Dashboard, press the "POS" button to open the POS Screen.

# idealpos Update History

[Return to top](#)

Press the Text String button that was configured above.

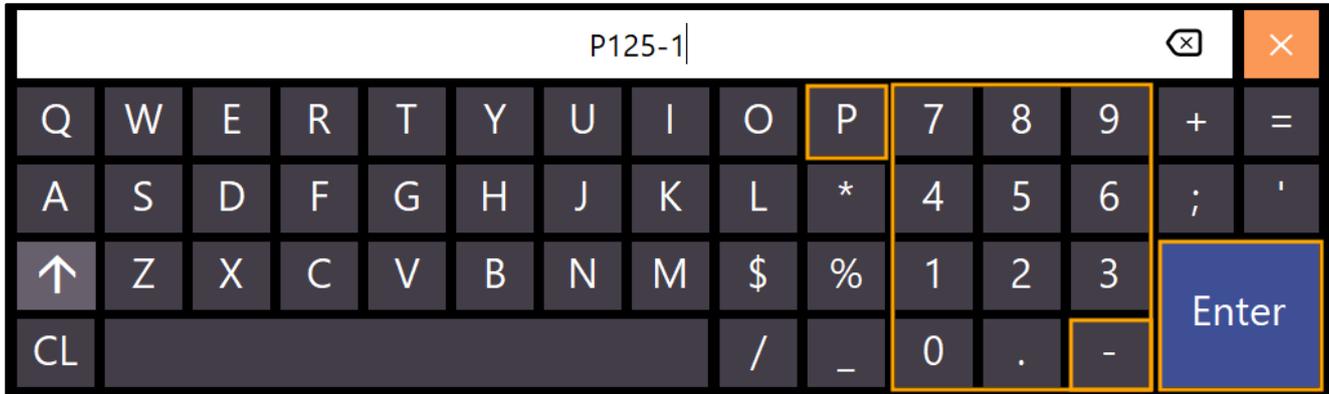

An on-screen keyboard will be displayed.

Enter the Pending Sale Code in the format of P[PendingSaleCode]-1.

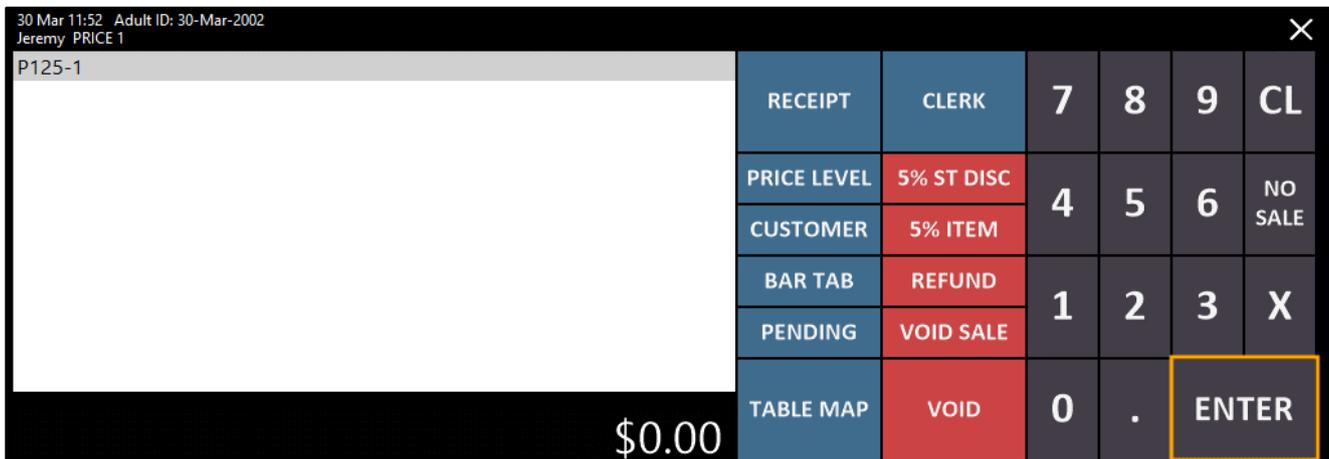

E.g. For a Pending Sale Code of 125, you will need to enter the below:

P125-1

The keys on the on-screen keyboard that will be used to enter the Pending Sale Code have been shown below:

Press the "ENTER" button on the on-screen keyboard to enter the value into the POS Screen.

After the ENTER button has been pressed, the items from the Pending Sale will be added to the Sale screen.

30 Mar 11:55 Adult ID: 30-Mar-2002		
Jeremy PRICE 1		
CAPPUCCINO	1	3.50
FLAT WHITE	1	3.50
SHORT BLACK	1	3.00
3x		\$10.00

The above process of entering the Pending Sale Code can be performed either when there are no items added to the sale or when items have already been added to the sale.

## POS Screen Functions

### Customer Search based on User-Defined Yes/No Fields

This function adds the ability to specify a User-Defined Yes/No option when configuring a Customer button on the POS Screen. Any Customers that have a Yes/No option enabled which matches the option configured on the button will be displayed on the POS Screen when the button is pressed.

Idealpos can support up to five User-Defined Yes/No options which can be assigned to your Customers.

Each of the five available Yes/No options can be customised for each venue as required.

After the User-Defined options have been configured, Customers can be assigned to them.

Once you have assigned your Customers to the required Yes/No options, the Customers button can be pressed.

Any Customers that match Yes/No option configured on the button will be displayed.

Examples of what the User-Defined Yes/No options can be used for include:

- Displaying Customers who pay weekly/monthly/quarterly
- Displaying Customers who are Juniors/Seniors
- Or any other Categories for a Customer that you require

To configure and use this function, go to: Setup > Global Options > Customers > User-Defined > Yes/No Fields  
Enter the required User-Defined Yes/No Options as required:

The screenshot shows the 'global options' configuration window for 'site 1 (Site 1)'. The 'Customers' tab is selected and highlighted with a yellow box. The 'User-Defined' section is expanded, showing a list of 'Text Fields' and a 'Yes/No Fields' section. The 'Yes/No Fields' section is highlighted with a yellow box and contains the following options:

- 1 Pays Weekly?
- 2 Pays Monthly?
- 3 Junior
- 4 Senior
- 5 User-Defined Yes/No

Other visible sections include 'A4 Tax Invoice', 'Layby Statement', 'Account Invoice/Activity Statement', 'Tender Spend Limits', 'Photo Folder', 'Customer Date Function', 'Miscellaneous', and 'Layby'.

Close the Global Options window to save the changes.

The next step is to assign Customers to the User-Defined Yes/No Fields.

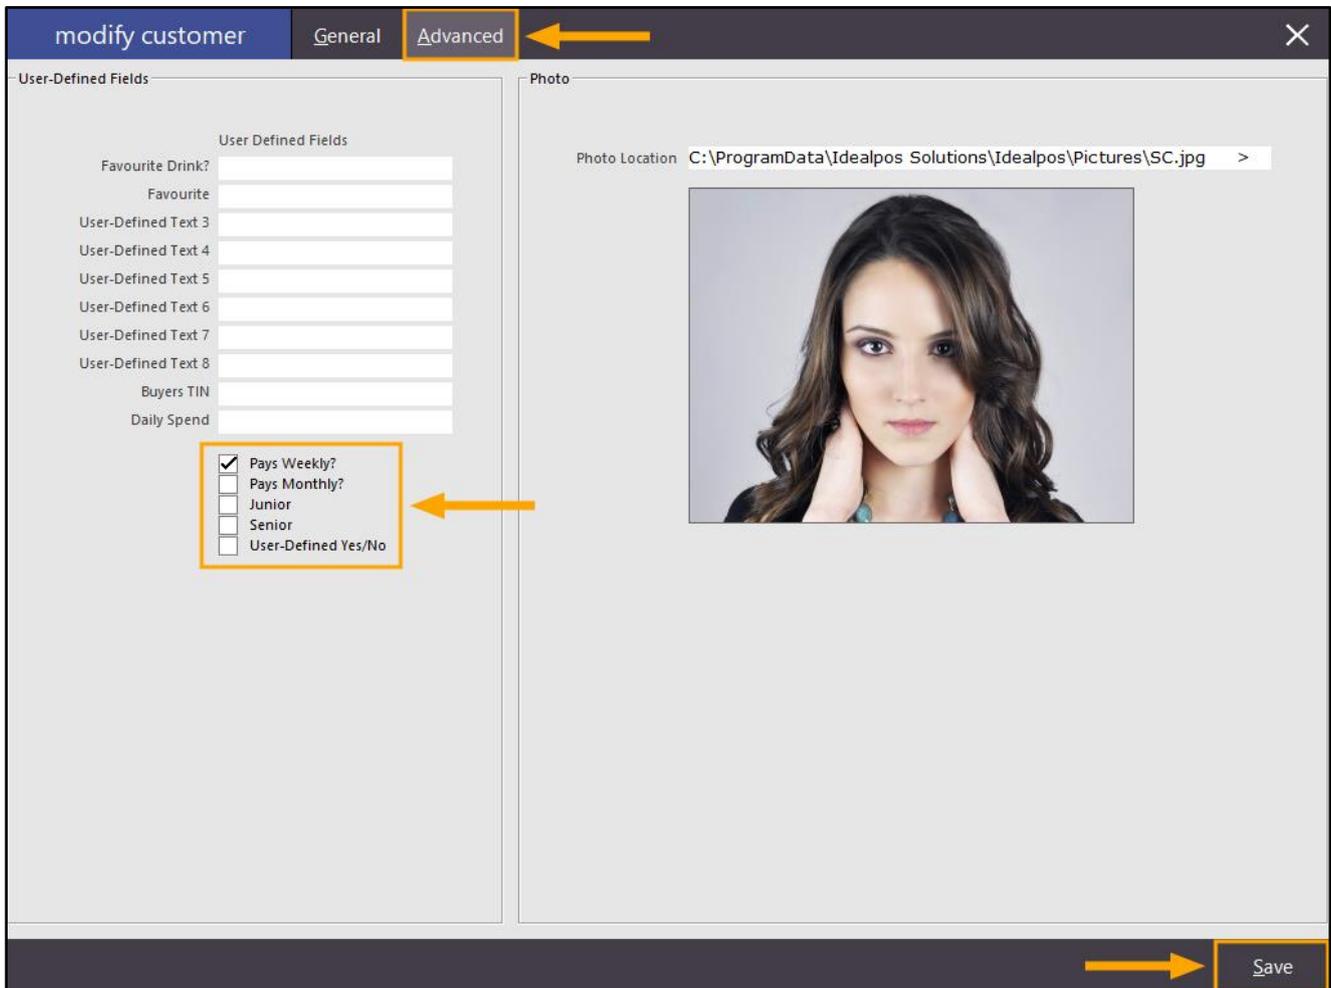

Go to: File > Customers > Customers

Search for a Customer that you want to assign to a Yes/No option and double-click on them.

Alternatively, click on the Customer once, then press the "Modify" button on the bottom-right corner of the Customers screen.

When modifying the Customer, click on the Advanced tab, then enable the User-Defined option checkboxes that you want to assign the Customer to, then press "Save" to save the changes.

The below example shows a single User-Defined option "Pays Weekly?" enabled.

# idealpos Update History

[Return to top](#)

Customers can also be assigned to multiple User-Defined Yes/No Fields as per the below example:

The screenshot displays the 'modify customer' dialog box with the 'Advanced' tab selected. The 'User-Defined Fields' section on the left contains several text input fields and a list of checkboxes. The 'Photo' section on the right shows a photo of a man wearing a cap. The 'Save' button is located at the bottom right.

Save

After Customers have been assigned to the required User-Defined Yes/No Fields, POS Screen buttons need to be created.

Go to:

Setup > POS Screen > POS Screen Setup > Select POS Screen Layout > Press "Buttons" on the bottom-left corner

To create the button on a POS Screen Tab, select one of the available tabs at the bottom of the screen.

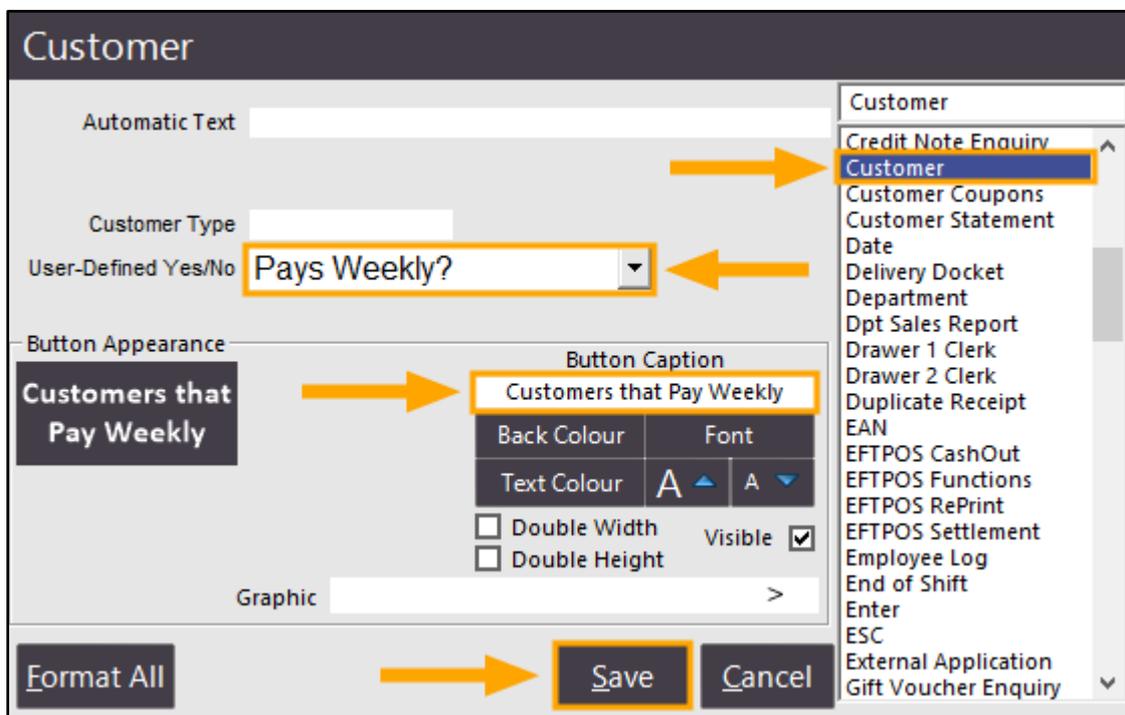

Alternatively, the button can be created on the top-right corner of the POS Screen which will ensure that the button is always displayed on the POS Screen, regardless of the POS Screen tab that is being viewed.

Select a blank/unassigned button, then configure by selecting the "Customer" option from the list of functions.

Then from the User-Defined Yes/No field, select the Yes/No field that you want to display when pressing this button.

Update the Button Caption to reflect the type of Customers that will be displayed when pressing the button.

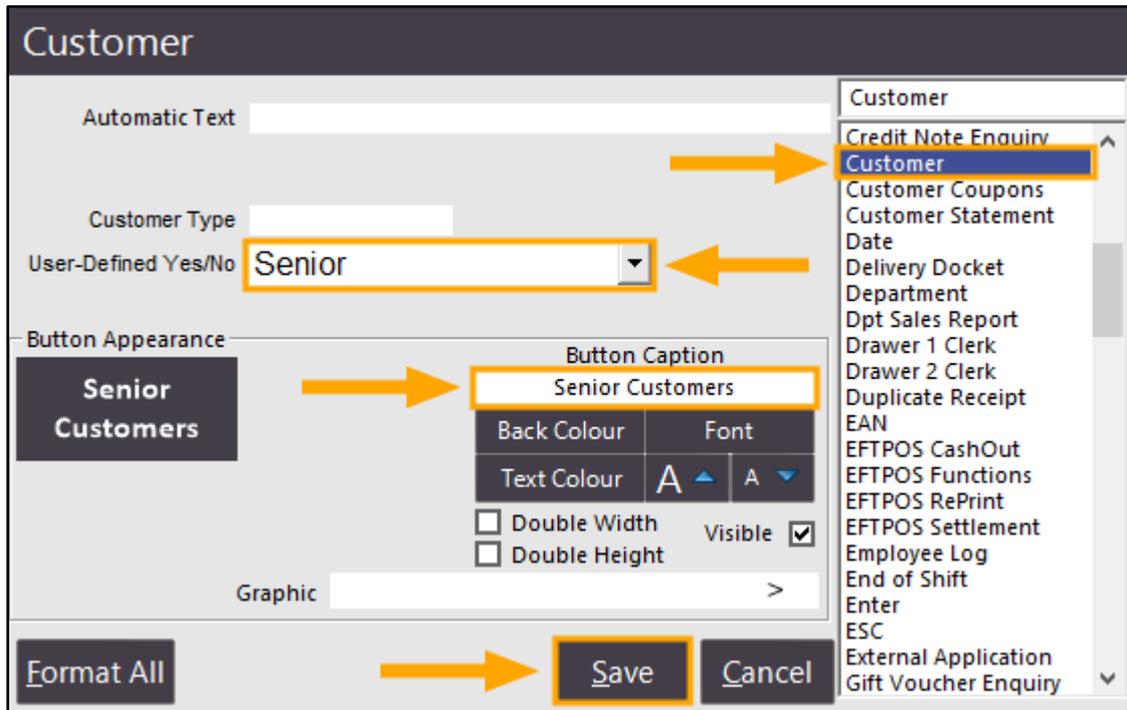

Press "Save" to save the changes.

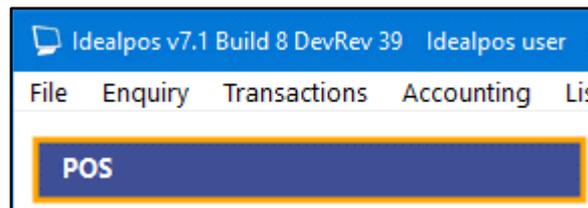

# idealpos Update History

[Return to top](#)

The above process can be repeated to create a new button for each Yes/No Field that you want to use to search for Customers on the POS Screen.

Close the POS Screen Layout windows, then open the POS Screen from the Back-Office Dashboard.

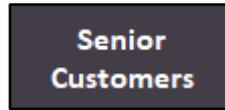

# idealpos Update History

[Return to top](#)

The below example shows the "Senior Customers" button being pressed.

A list of Customers which have the User-Defined Yes/No Field will be displayed. In this example, a single Customer was assigned to the "Senior" Yes/No Field.

The screenshot shows a software interface for managing customers. At the top, there is a blue header bar with the text "customers" and a close button (X) on the right. Below the header, a white card displays the name "Ben Harrison" and a small number "1" below it. The main area is a dark grey grid with a search bar on the left and a table of customer data. The table has columns for "Name", "Phone", "Company", and "Code". Below the table is a virtual keyboard with various keys, including letters, numbers, symbols, and a "New Customer" button.

## Department Sales Report Button in POS – Default to only show sales for the current terminal

This function adds the ability to control whether the Department Sales Report Button on the POS screen shows Department Sales from either all POS terminals or just the current POS terminal.

Previous to this change, only the ability to enter a specific POS Terminal number was available via the Automatic Text field. However, this would affect the Department Sales Report button on all POS terminals that used the same POS Screen Layout which would result in all terminals displaying the Department Sales Report for the terminal number entered in the Automatic Text field.

With this change, it is now possible to toggle a checkbox called "All POS Terminals" when configuring the Department Sales Report Button.

To configure and use this function, go to:

Setup > POS Screen > POS Screen Setup > Select a layout > Press "Buttons" on the bottom-left corner of the window.

Click on a POS Screen tab at the bottom of the POS Screen Layout where you want to create/modify the Department Sales Report button.

If Modifying an existing button, look for the Department Sales Report button and click on it.

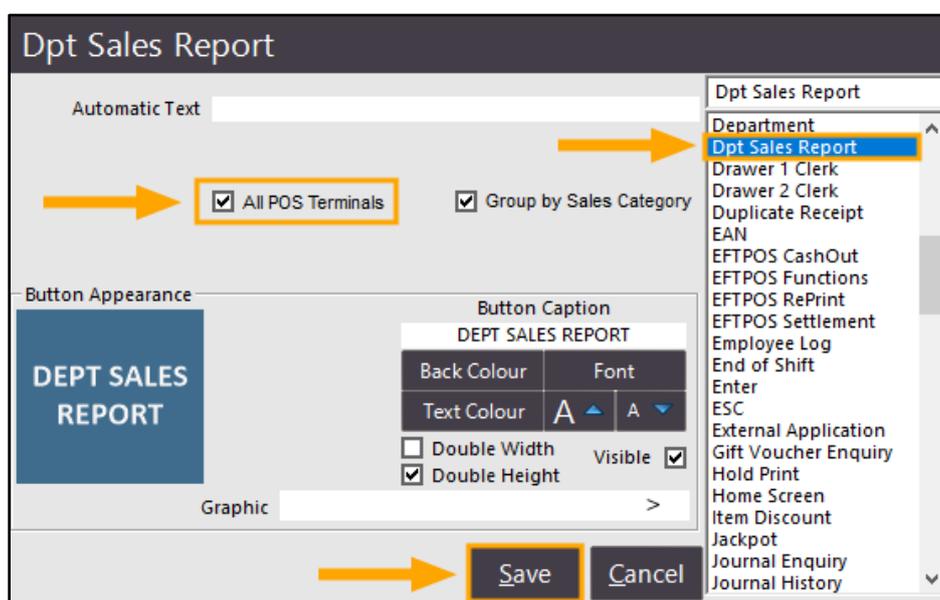

If creating a new button, look for an unused/blank button and click on it.

Toggle the "All POS Terminals" checkbox as required.

Details about the way the checkbox works are outlined below:

- When the "All POS Terminals" checkbox is enabled, Department Sales from all POS Terminals will be displayed.
- When the "All POS Terminals" checkbox is disabled, Department Sales from the current POS Terminal will be displayed.
- If a single numeric value (e.g. 2) is entered in the "Automatic Text" field, it will trigger the report to only show Department Sales from POS Terminal 2 and the "All POS Terminals" checkbox will be ignored.  
If a date is entered into the Automatic Text field (e.g. "1/3" or "1,3" or "1-3"), the report will show Department Sales from the entered date up to today's date (the report will display sales figures that took place within the date range).  
When a date is entered in the Automatic Text field, the All POS Terminals checkbox will apply.

Once the button has been configured, press the "Save" button.

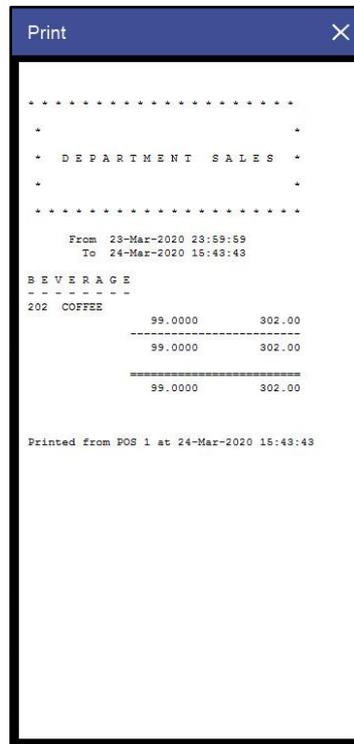

Close the POS Screen Layout window, then open the POS Screen from the Back-Office Dashboard.

# idealpos Update History

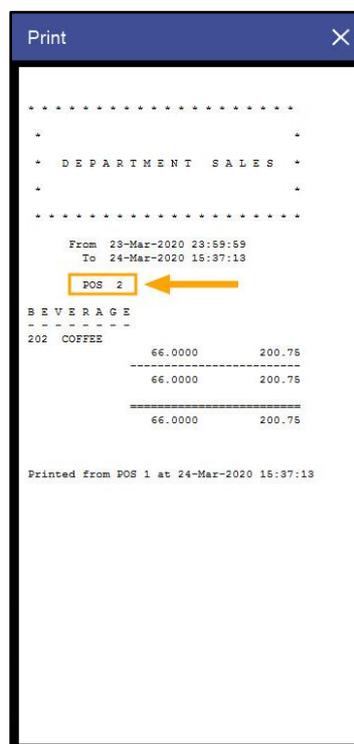

[Return to top](#)

Navigate to the POS Screen tab which contains the "Department Sales Report" Button and press it. The report will be displayed on-screen and will reflect the Department Sales Report data as per the button configuration that was completed above.

E.g. If the All POS Terminals option was enabled, the report will be displayed and will not show a POS Terminal number towards the top of the report (indicating that the report is showing report figures for all terminals).

If the All POS Terminals option was disabled, the report will be displayed and will show the POS Terminal number towards the top of the report (indicating that the report is showing report figures from only the current terminal).

## Reports

### Clear Default Export Format button on Report Screen

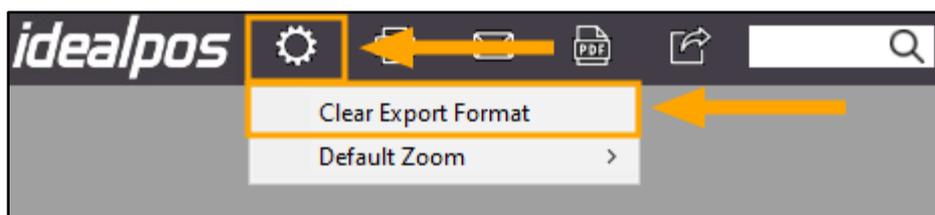

This function adds the ability to clear the Default Export Format from the Report Screen allowing easier access to this function. Previous to this change, the Clear Default Export Format button used to exist in the Global Options > General screen. After this change, the Clear Default Export Format button is no longer displayed in Global Options. As part of this change, the Default Zoom has also been moved from Global Options to the Report screen.

To use this function, go to: Reports > Select a Report Category > Select a Report Type

To access the function, you will need to run the selected Report.

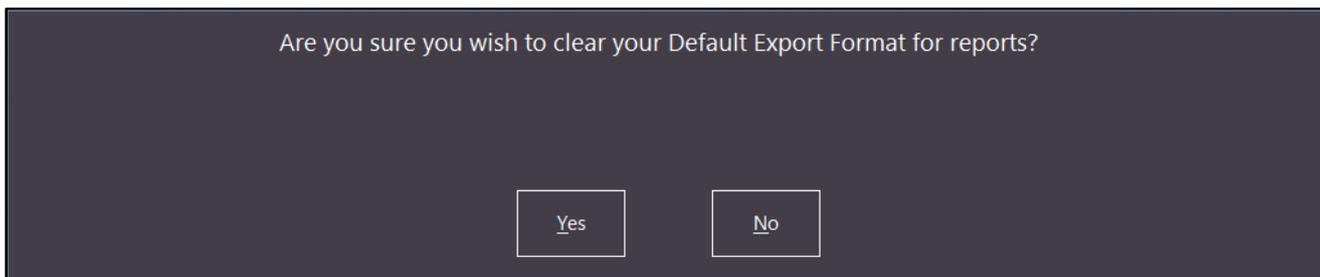

Select the required criteria then press the "View" button to run the report.

When viewing the Report, press the cog icon on the top-left corner of the screen, then select the "Clear Export Format" option. The Default Zoom can also be changed by hovering over the Default Zoom option on the menu and selecting a zoom level from the list.

A confirmation prompt will be displayed.

Press "Yes" to continue with clearing the export format, otherwise press "No" to cancel without clearing the export format.

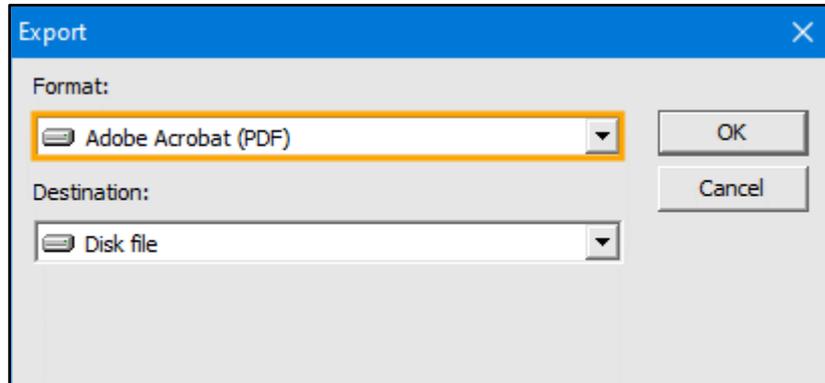

# idealpos Update History

[Return to top](#)

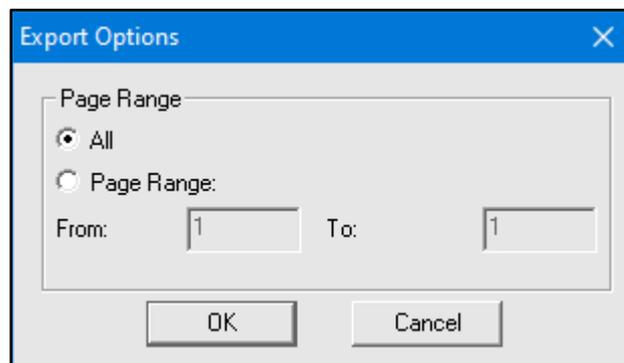

A new Default Export Format can be set by pressing the Export button on the top-left corner of the report screen:

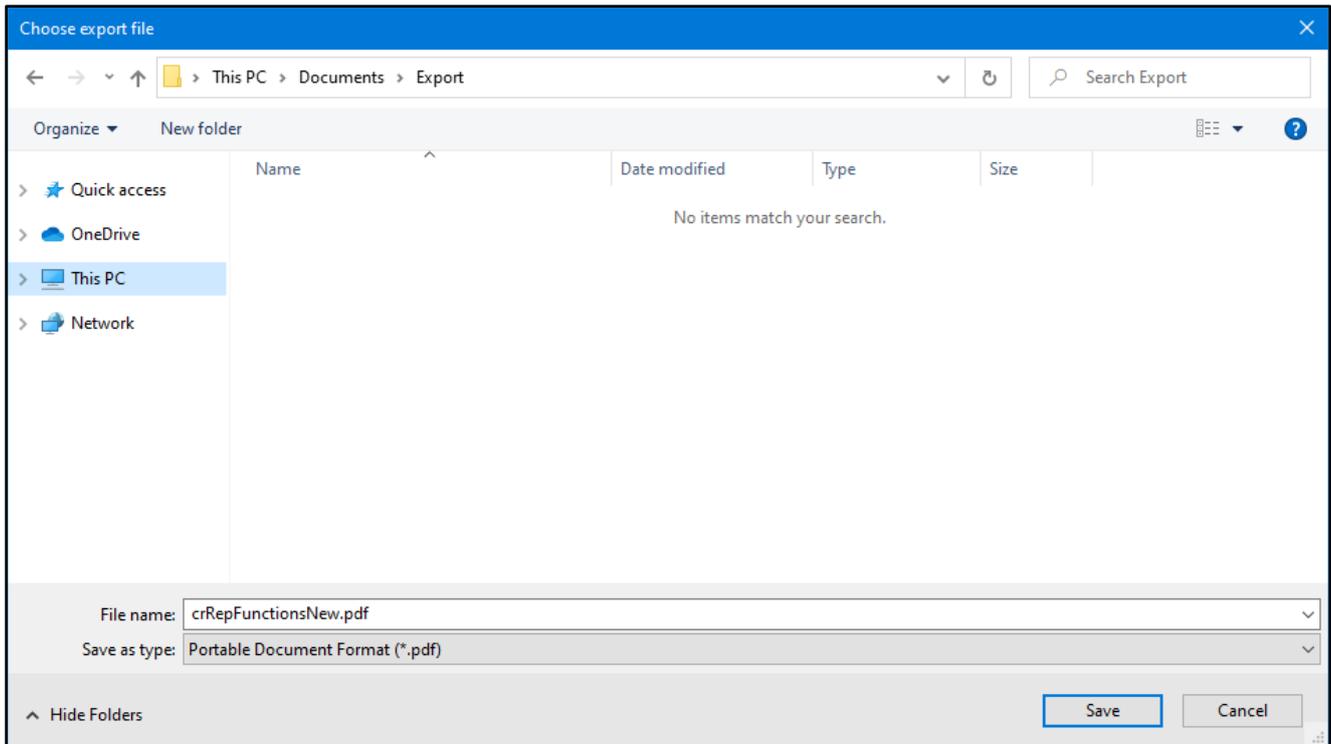

Select the desired Format from the Format dropdown box, then press OK to continue:

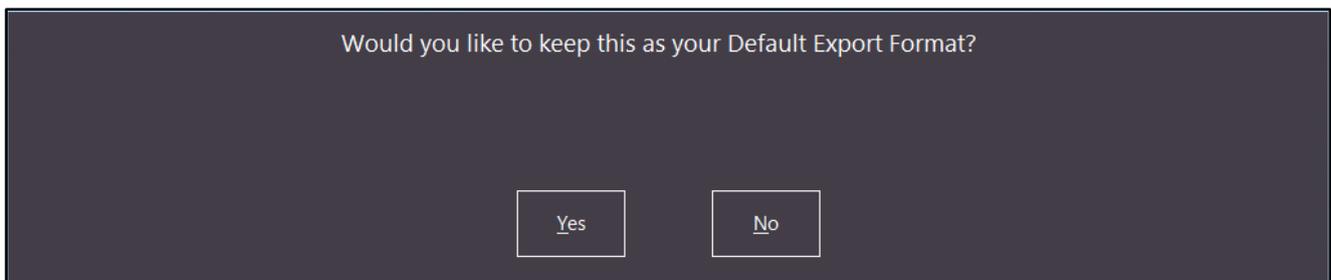

You may be prompted to select a Page Range. Leave as "All", or select the desired Page Range then press "OK" to continue.

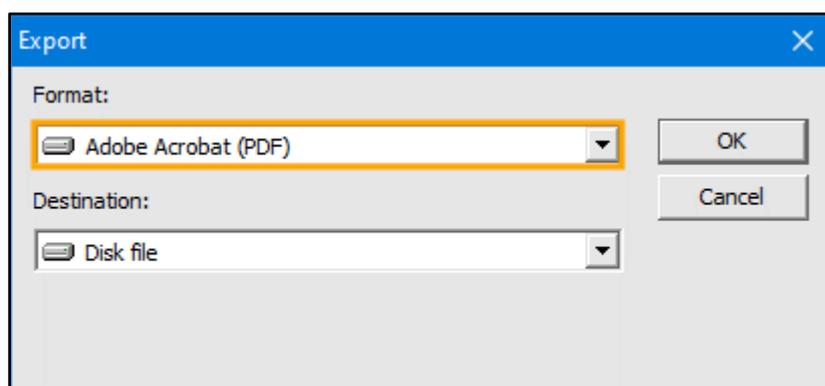

Browse to any location required, enter a File name and press the "Save" button.

After saving the file, you will be prompted "Would you like to keep this as your Default Export Format?". Select "Yes" to have the Default Export Format saved.

Once the Default Export Format has been set, the next time the Export button is pressed, the below Export Format prompt will not be displayed:

# idealpos Update History

## Stock Remaining Report – Ability to specify which Price Level to use

This function adds the ability to control which Price Level to use and display on the Stock Remaining Report. Prior to this change, the report displayed a Sell Price column which always used the Price Level 1 Sell Price. When running the report, a new dropdown option now exists to specify the Price Level to use when running the report. The Price Level description will be displayed on the column header that previously displayed "Sell Price".

To use this function, go to: Reports > Sales > Stock Remaining

Use the Price Level dropdown box to select the desired Price Level.  
Select any other report criteria as required, then press "View" to run the Report.

## Restaurant and Table Map

### Yes/No Option – Table Details Delete asks Reason for Activity Log

This function is applicable to the Restaurant Module and enables the ability to control whether the list of Reasons are displayed when item(s) are being deleted from a table.

Recording the reason why an item was deleted from a table can be useful for reporting purposes.

To configure this function, go to: Setup > Yes/No Options > Enter Keyword Search: Reason  
Toggle the checkbox for the POS Terminals that you want to enable or disable this function

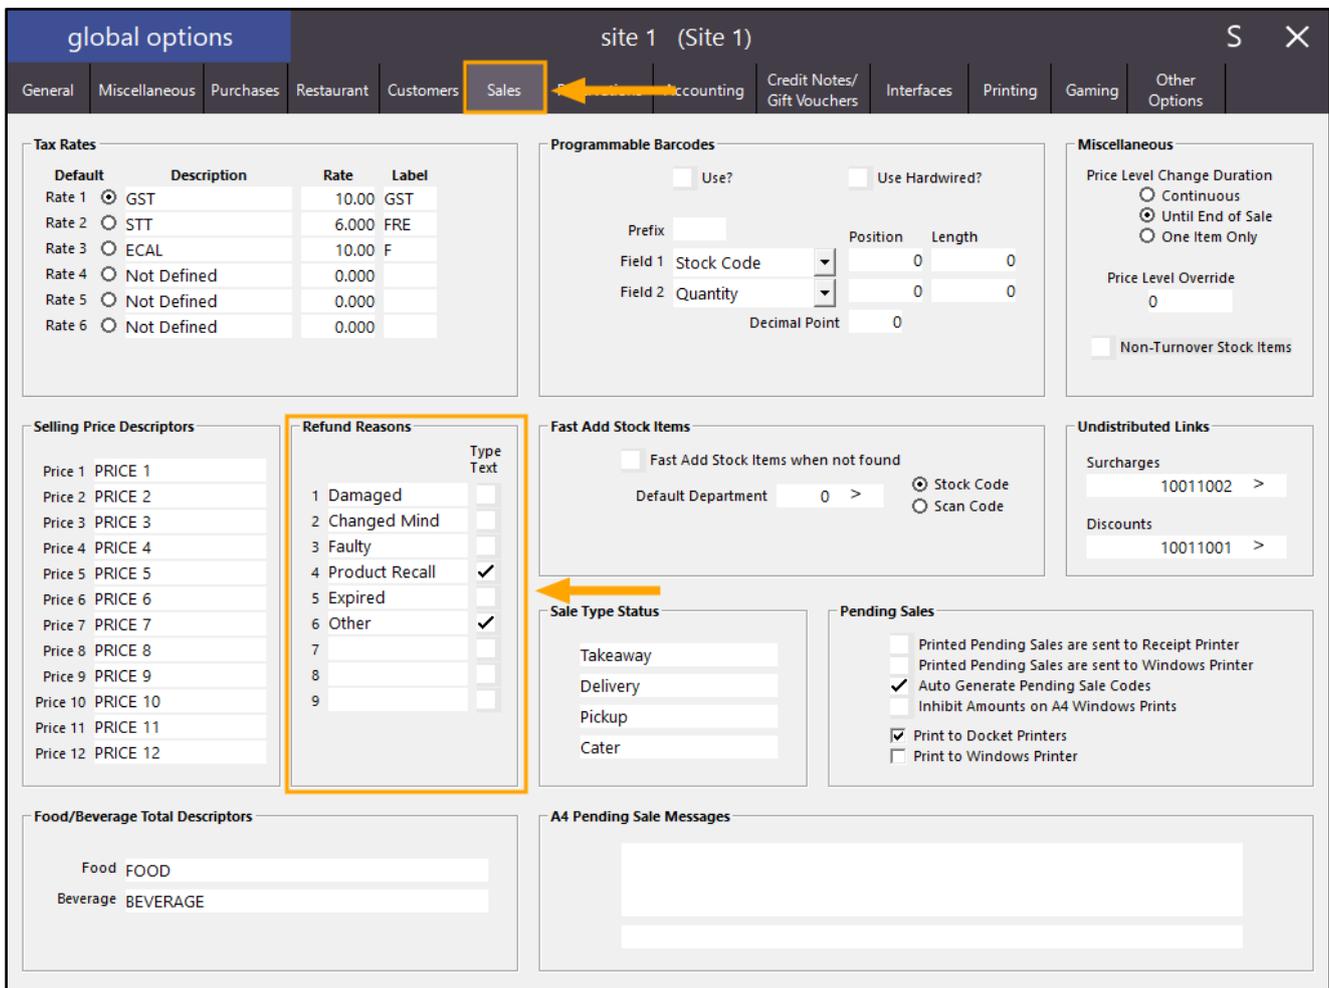

Close the Yes/No Options window to save the changes.

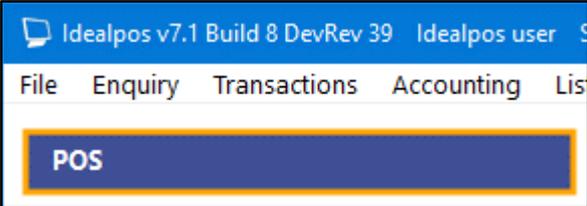

At this point, you may also want to review the list of Reasons that will be displayed.

To do this, go to: Setup > Global Options > Sales > Refund Reasons

Update the list of reasons as required, then close the Global Options window to save your changes:

From the Back-Office dashboard screen, open the POS Screen by pressing the "POS" button.

Once the POS Screen is displayed, click on the "Table Map" button:

Select a table from the Table Map, then press the "Details" button:

# idealpos Update History

[Return to top](#)

Select one or more item(s) from the table then press the "Delete" button:

TABLE 73		\$151.00

[Return to top](#)

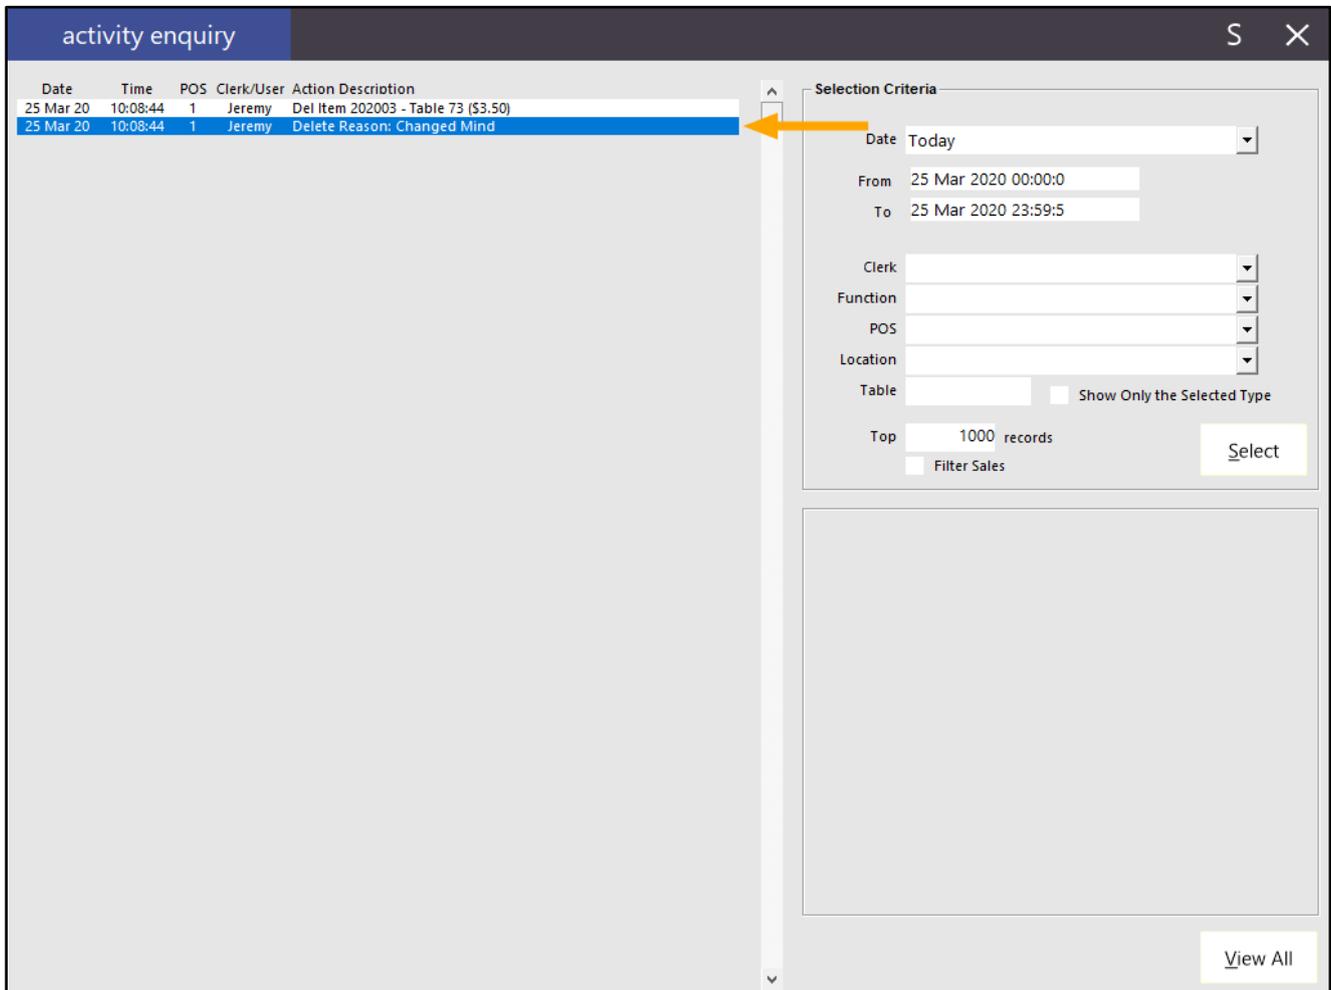

The Item will be deleted from the Table.

The Refund Reason for the item deletion will be recorded in the Activity Log.

To view the Activity Log, close the Table Details, Table Map and POS Screen, then go to: Enquiry > Activity Log

The Action Description for the deleted item will appear as "Del Item [ITEMCODE] – Table [TableNumber] (\$amount)".

The Delete Reason will be displayed below the Del Item entry as per the below example.

The screenshot shows the 'activity enquiry' window. On the left, a table displays activity logs with columns for Date, Time, POS, Clerk/User, and Action Description. The second row is highlighted in blue and contains the text: '25 Mar 20 10:08:44 1 Jeremy Delete Reason: Changed Mind'. An orange arrow points to this row. On the right, the 'Selection Criteria' panel includes fields for Date (Today), From (25 Mar 2020 00:00:0), To (25 Mar 2020 23:59:5), Clerk, Function, POS, Location, and Table. It also features a 'Show Only the Selected Type' checkbox, a 'Top 1000 records' field, a 'Filter Sales' checkbox, and a 'Select' button. A 'View All' button is located at the bottom right of the window.

Date	Time	POS	Clerk/User	Action Description
25 Mar 20	10:08:44	1	Jeremy	Del Item 202003 - Table 73 (\$3.50)
25 Mar 20	10:08:44	1	Jeremy	Delete Reason: Changed Mind

# Schedules

## Support for Scheduled POS Screen Layouts

This function adds the ability to create and configure a schedule that will be used to change the POS Screen Layout at specified intervals during the days that have been selected in the schedule.

The following is a list of various examples that Scheduled POS Screen Layouts can be used for:

- Venues that have a specific menu or items available for a period of time each day such as happy hour or items that are only available for late-night dining, etc.
- When the POS is being used as a Kiosk and the customers using the Kiosk should only see items applicable to the time of day that they're placing an order (e.g. Breakfast menu, Lunch menu, Dinner menu, etc.).
- Change the POS Screen Layout as a one-off change on a future date (e.g. setting a POS Screen Layout that will contain new Stock Items that will be available in the future).

After POS Screen Layout is changed by a schedule, the new layout will be displayed on the POS Screen and will also be reflected in: Setup > POS Terminals > Modify > POS Screen Layout.

Note that Scheduled POS Screen Layouts do not work in the same way as a Special Price Schedule works.

E.g. With a Special Price Schedule, a Price Level only applies between a start/end time and the Sell Price reverts back to the normal price after the Special Price Schedule (Start Time/End Time) is over.

Whereas a Scheduled POS Screen Layout works by changing the actual POS Screen Layout to the selected layout at the date/time/interval configured in the Schedule.

You will therefore need to create a separate Schedule for each POS Screen Layout that you want to set.

E.g. Create a Schedule to set the POS Screen Layout to a Happy Hour Layout at the start of the Happy Hour, then create another schedule to revert the POS Screen layout back to the standard layout after the Happy Hour is over.

Before configuring this function, ensure that you have created one or more separate POS Screen Layout(s) which will be triggered by the schedule.

You have the option to either create a completely new layout, or alternatively, you can copy an existing layout and modify it as required.

# idealpos Update History

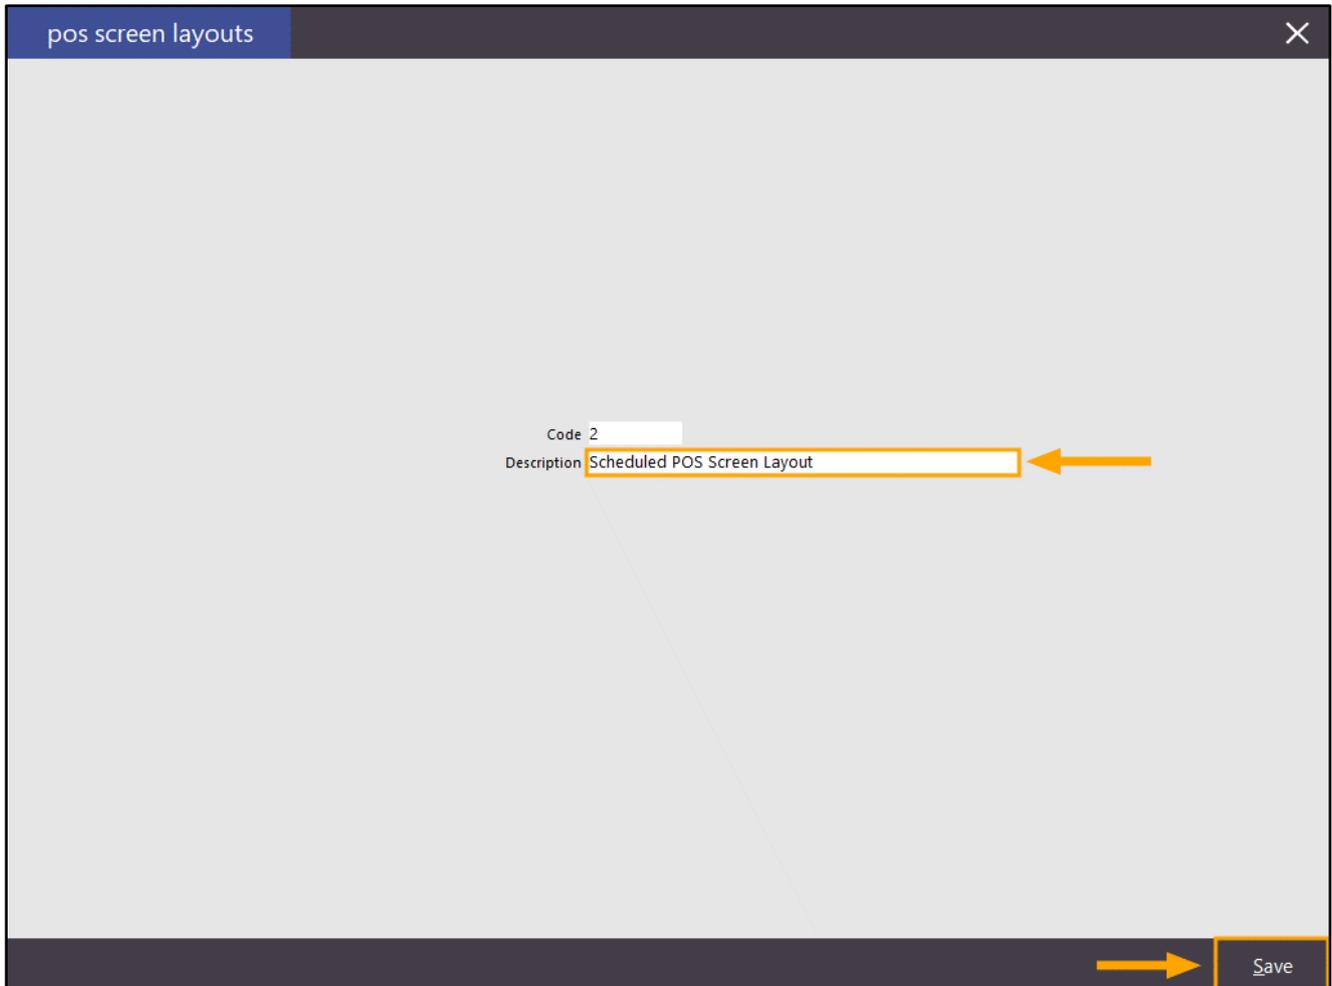

[Return to top](#)

To create/copy a POS Screen Layout, go to: Setup > POS Screen > POS Screen Setup

Press the "Add" button on the bottom-right corner of the window to create a new layout.

Enter a Description for the layout (e.g. Happy Hour, Scheduled POS Screen Layout or whichever description best represents the purpose of the layout).

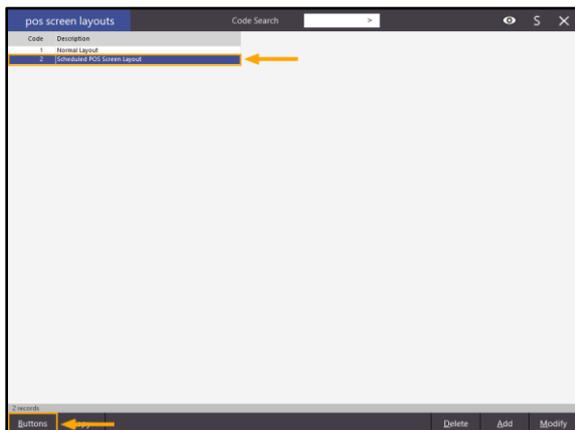

Press "Save" to create the layout.

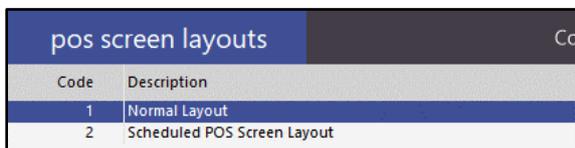

The screenshot shows a window titled "pos screen layouts" with a close button in the top right corner. The main area contains a form with two fields: "Code" with the value "2" and "Description" with the value "Scheduled POS Screen Layout". A yellow arrow points to the "Save" button at the bottom right of the window.

Press the "X" button on the top-right corner of the window to close the create new POS Screen Layout window. You have two options after creating the new layout as follows:

- Option 1 – Create a new layout from scratch  
This can be done by selecting it from the list of layouts, then press the button labelled "Buttons" from the bottom-left corner of the window. Then you'll need to configure the layout.

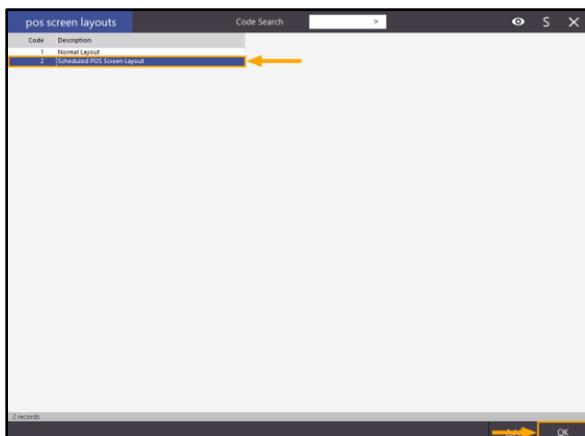

- Option 2 – Copy an existing layout to the newly created layout.  
This can be done as follows:  
- Select an existing layout from the list of layouts.

- Press the "Copy" button on the bottom-left corner of the window.

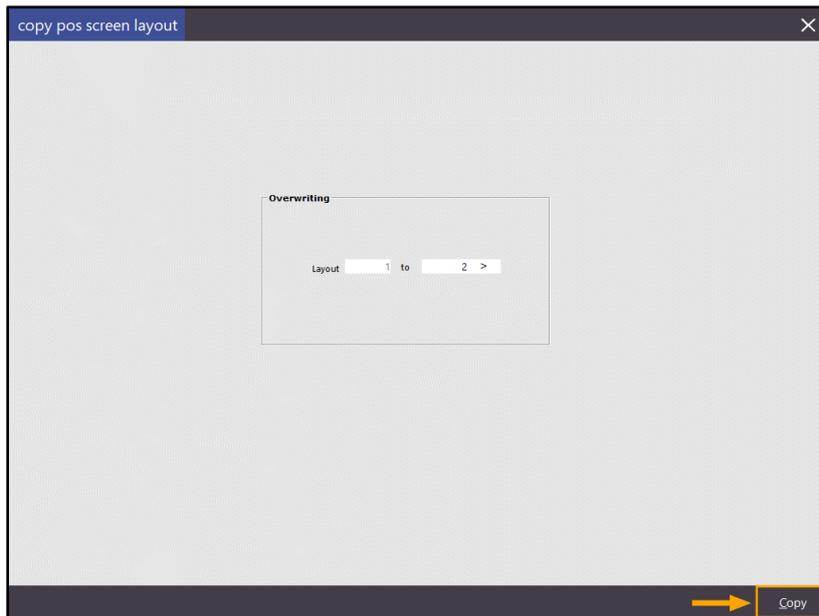

- Press the ">" button in the "To" field and select the new layout from the list press and press "OK" to select the layout.

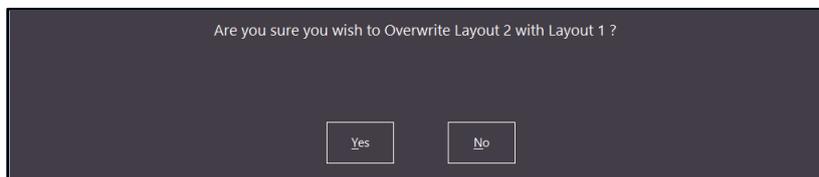

# idealpos Update History

[Return to top](#)

- Press "Copy" to copy the button layout from the existing layout to the newly created layout.

- When confirming the Overwrite, ensure that the Layout Codes displayed on the Confirm prompt are reflective of the layouts that you are updating, then press "Yes".

**Selecting the wrong layout during the copy operation can result in clearing the existing layout. Use caution when copying layouts and ensure that the Layout Code displayed in the confirm prompt reflects the action you want to perform!**

**E.g. "Are you sure you wish to Overwrite Layout 2 with Layout 1?" means that Layout 2 is going to be completely cleared and overwritten using the layout from Layout 1.**

**If in doubt or unsure, request assistance to prevent accidentally overwriting the wrong layout!**

For more information about creating or modifying POS Screen Layouts, refer to the [POS Screen Setup](#) topic in the User Guide.

Once the POS Screen Layout has either been copied or created as above, close the POS Screen layouts window. The next step involves the creating the schedule(s).

Go to: Setup > Schedules > Add

From the Type Dropdown box, select POS Screen Layout.

Then select a POS Screen Layout from the right-hand side of the screen.

The Description that is displayed above the Type dropdown box will reflect the name of the POS Screen Layout selected.

The screenshot shows a window titled 'schedules' with a close button in the top right corner. The window is divided into two main sections. On the left, there is a configuration form with the following fields and options:

- Description:** A text box containing 'Scheduled POS Screen Layout'. Two orange arrows point to this field from the right.
- Type:** A dropdown menu showing 'POS Screen Layout'. Two orange arrows point to this dropdown from the right.
- Run next at:** A date and time picker set to '08 Apr 2020 14:00' with a calendar icon and a checkbox for 'Run Once Only'.
- Repeat Every:** A dropdown menu set to '1' with a 'Days' label and a dropdown arrow.
- From:** A time picker set to '00:00'.
- to:** A time picker set to '23:59'.
- Days:** A set of checkboxes for 'Mon', 'Tue', 'Wed', 'Thu', 'Fri', 'Sat', and 'Sun', all of which are checked.
- POS Terminals:** A text box that is currently empty.

On the right side of the window, there is a panel titled 'Choose POS Screen Layout'. It contains a list of two items:

- 1:Normal Layout
- 2:Scheduled POS Screen Layout

The second item, '2:Scheduled POS Screen Layout', is highlighted with a blue selection bar. An orange arrow points from the 'Type' dropdown on the left to this list.

# idealpos Update History

[Return to top](#)

POS Screen Layouts can either be scheduled as a one-off occurrence or a recurring schedule.

- If creating a one-off schedule to change the POS Screen Layout, you will only need to create a single Schedule entry and enable the "Run Once Only" checkbox. The POS Screen Layout will change at the entered date/time and the Schedule will not repeat or execute again.

The screenshot shows the configuration interface for a one-off schedule. On the left, the 'Description' is 'Scheduled POS Screen Layout', the 'Type' is 'POS Screen Layout', and the 'Run next at' date is '08 Apr 2020 14:00'. The 'Run Once Only' checkbox is checked and highlighted with a yellow box and an arrow. Below this, there is a field for 'POS Terminals' with the value '1'. On the right, a panel titled 'Choose POS Screen Layout' shows two options: '1:Normal Layout' and '2:Scheduled POS Screen Layout', with the second option selected.

- If creating a recurring schedule to change the POS Screen Layout, the recurring schedule will set the selected POS Screen Layout at the entered interval. You will therefore need to create a Schedule for each POS Screen Layout that you want to set.  
E.g. If you want to have a specific POS Screen Layout appear daily from 1:00PM until 2:00PM, you will need to create two Schedules to run daily.

The first schedule will need to be configured to set the POS Screen Layout at 1:00PM:

The screenshot shows the configuration interface for a recurring schedule. The 'Description' is 'Scheduled POS Screen Layout', the 'Type' is 'POS Screen Layout', and the 'Run next at' date is '07 Apr 2020 13:00'. The 'Run Once Only' checkbox is unchecked. Below this, the 'Repeat Every' is set to '1 Days', and the 'From' time is '00:00' to '23:59'. The days of the week are all selected: Mon, Tue, Wed, Thu, Fri, Sat, and Sun. Below this, there is a field for 'POS Terminals' with the value '1'. On the right, a panel titled 'Choose POS Screen Layout' shows two options: '1:Normal Layout' and '2:Scheduled POS Screen Layout', with the second option selected.

The second schedule will need to be configured to set the POS Screen Layout back to the Normal Layout at 2:00PM:

The screenshot shows the configuration interface for a recurring schedule. The 'Description' is 'Normal Layout', the 'Type' is 'POS Screen Layout', and the 'Run next at' date is '07 Apr 2020 14:00'. The 'Run Once Only' checkbox is unchecked. Below this, the 'Repeat Every' is set to '1 Days', and the 'From' time is '00:00' to '23:59'. The days of the week are all selected: Mon, Tue, Wed, Thu, Fri, Sat, and Sun. Below this, there is a field for 'POS Terminals' with the value '1'. On the right, a panel titled 'Choose POS Screen Layout' shows two options: '1:Normal Layout' and '2:Scheduled POS Screen Layout', with the first option selected.

The options available when creating a Schedule are explained in further detail below:

**Run next at:** Select the date and time that you want the schedule to occur.

**Run Once Only:** Enable the checkbox to only run the schedule once using the date/time entered in the "Run next at" field. The Run Once Only option may be useful for scheduling a one-off change to the POS Screen Layout in the future, such as the introduction of new items to the POS Screen.

**Repeat Every # Minutes/Hours/Days/Weeks/Months:** Enter a value and select the period type (e.g. Minutes, Hours, Days, etc.) from the dropdown box. Note that the period type selected will affect the availability of the below options as some options are only applicable to specific period types.

An example of this is if you select Repeat every 1 Days, the From and To time fields will be greyed out.

**From/To:** This field only applies to the Repeat Every Minutes and Hours period type.

Enter the Start/End Time that you want the schedule to trigger. The Time is entered in 24-hour format.

**Mon-Sun** – These checkboxes for the days of the week only apply to the Repeat Every: **Minutes, Hours** and **Days** Period Types. Enable the checkbox next to each day of the week that you want the schedule to be active.

**POS Terminals** – Enter the POS Terminal Number(s) that you want the schedule to apply to. Terminal Numbers can be entered as a single terminal number to only apply to a single terminal (e.g. 1), a range of terminal numbers (e.g. 1-3) or a comma delimited list (e.g. 1,2,3).

The screenshot shows a configuration window for a schedule. The title is "Scheduled POS Screen Layout". The "Description" field contains "Scheduled POS Screen Layout". The "Type" dropdown is set to "POS Screen Layout". The "Run next at" field is set to "08 Apr 2020 14:00" with a calendar icon. The "Run Once Only" checkbox is unchecked. The "Repeat Every" field is set to "1" and the dropdown is set to "Days". The "From" field is "00:00" and the "to" field is "23:59". All days of the week (Mon, Tue, Wed, Thu, Fri, Sat, Sun) are checked. The "POS Terminals" field contains "1".

After the settings for the Schedule have been entered, close the current Schedule by pressing the "X" on the top-right corner of the window which will save the Schedule and return to the list of Schedules.

The newly created Schedule(s) will be displayed in the list of existing Schedules:

Description	POS	Next Scheduled	Type	Send To
Scheduled POS Screen Layout	1	07 Apr 2020 13:00	POS Screen Layout	POS 1
Normal Layout	1	07 Apr 2020 14:00	POS Screen Layout	POS 1

The columns displayed on the Schedules list are:

**Description:** Shows the Description of the POS Screen Layout that is selected in the Schedule.

**POS:** Shows the POS Number where the Schedule was created on.

**Next Scheduled:** Shows the next scheduled Date and Time that the schedule will be executed.

**Type:** The Type of Schedule (E.g. Email Reports, Print Reports, Send Message, POS Screen Layout, etc.).

**Send To:** The POS Terminals that the POS Screen Layout will be sent to when the schedule is executed.

# *idealpos* Update History

[Return to top](#)

Once Schedules for the POS Screen Layouts have been configured, close the Schedules window.

When a Schedule is updating the POS Screen Layout, the POS Terminal will briefly display "Loading new POS Layout".

If items have been added to the sale and a sale is currently in progress on the POS Screen, the POS Screen Layout will only be updated after the current sale has been tendered off and finalised.

If Idealpos is not running or if the POS Screen is not open at the time the schedule is executed, the next time Idealpos/ POS Screen is opened, the new POS Screen Layout will be applied shortly afterwards.

## Yes/No Options

### Yes/No Option – Skip Post-Transaction Tipping Receipt

This function adds the ability to disable the printout of a tipping receipt when applying a tip to a sale (post-transaction). This setting is disabled by default to prevent the modification of the existing post-transaction tipping receipt behaviour at any venues that currently rely on them.

However, if your venue does not require or rely on a printout of a post-transaction receipt, this can be disabled, allowing the conservation of receipt rolls so they last longer.

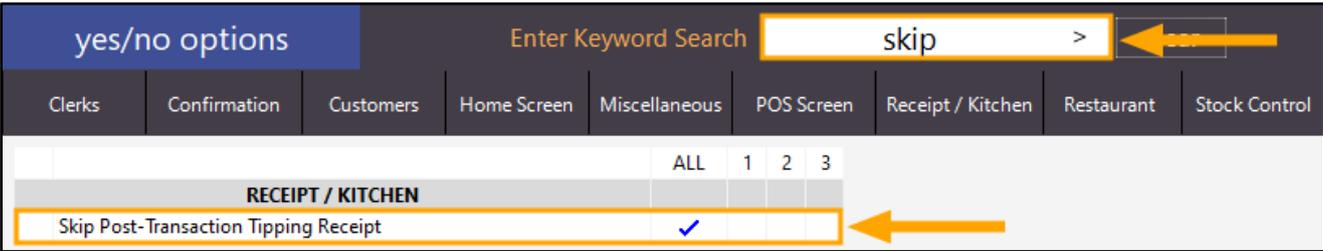

This setting is only applicable to venues which use an EFTPOS integration that supports Post-Transaction tipping. An example of an EFTPOS integration that supports Post-Transaction tipping is First-American.

To configure this function, go to:

Setup > Yes/No Options

Enter Keyword Search: skip

Enable the Yes/No Option "Skip Post-Transaction Tipping Receipt"

yes/no options		Enter Keyword Search		skip		>		
Clerks	Confirmation	Customers	Home Screen	Miscellaneous	POS Screen	Receipt / Kitchen	Restaurant	Stock Control
				ALL	1	2	3	
<b>RECEIPT / KITCHEN</b>								
Skip Post-Transaction Tipping Receipt				✓				

Close the Yes/No options to apply the change.

A Post-Transaction tip can now be applied to a transaction and after the tip is processed, the receipt will not be printed.

As there may be numerous EFTPOS integrations that support Post-Transaction tipping, please refer to the process that is applicable to your EFTPOS integration type.

For the purpose of referring to an EFTPOS Integration that supports Post-Transaction tipping, the First American Tip Adjustment topic can be referred to in the User Guide [here](#), however, the steps for performing a Post-Transaction tip may vary depending on the EFTPOS integration you are using.
